Overview and work methods

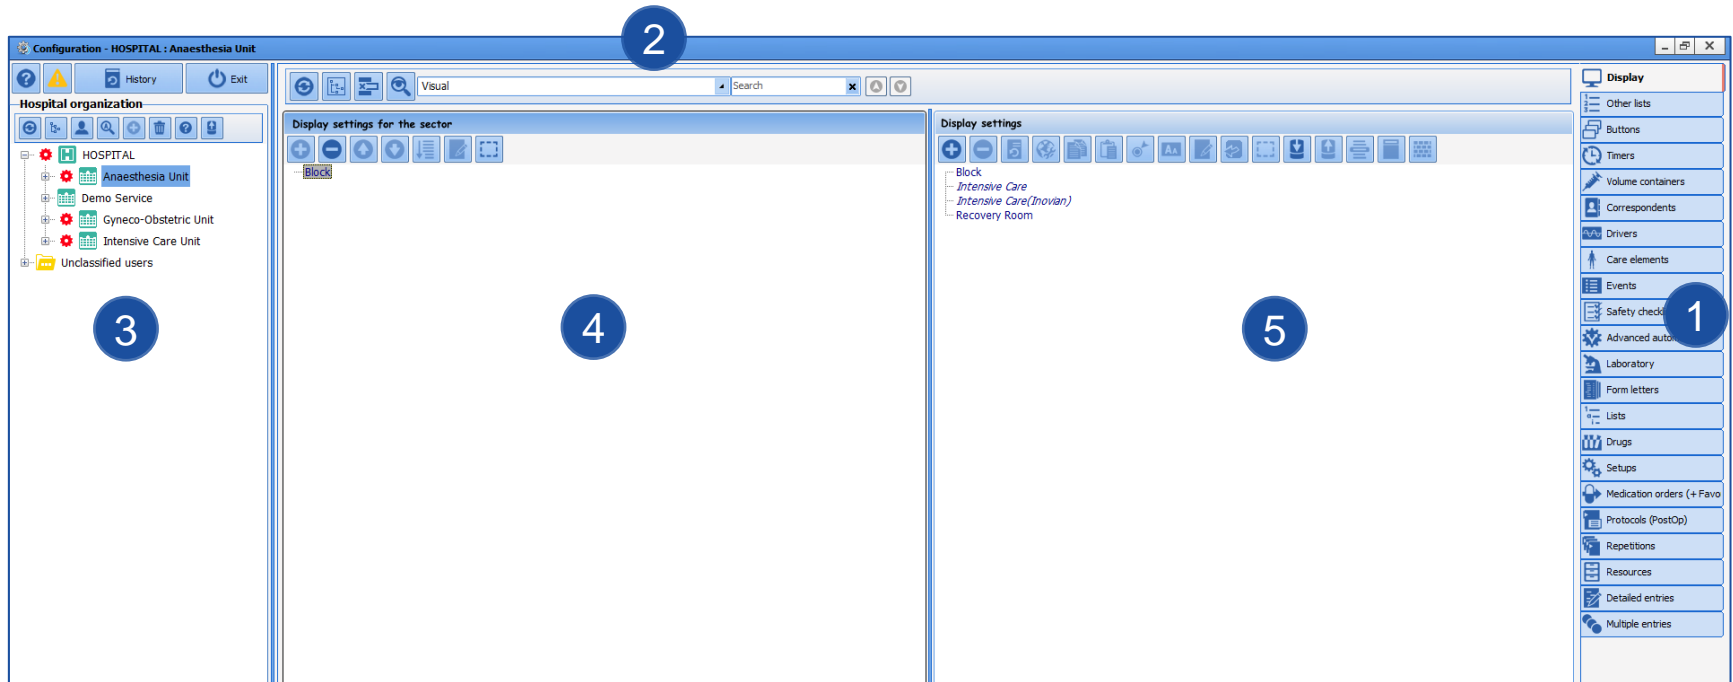

- The configuration tool
- Explanation of the icons
- Cogwheels
- A few setup rules

The configuration tool

The configuration tool

The configuration tool is divided into **five panes**:

The configuration tool

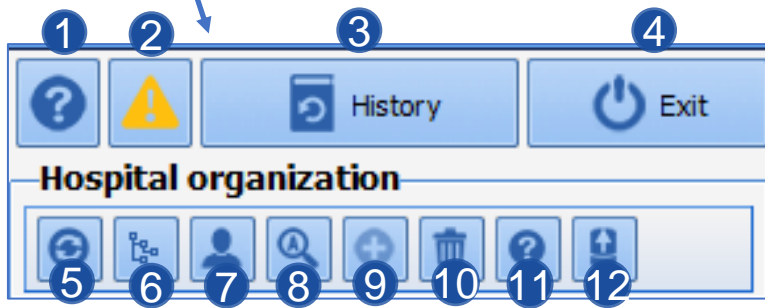

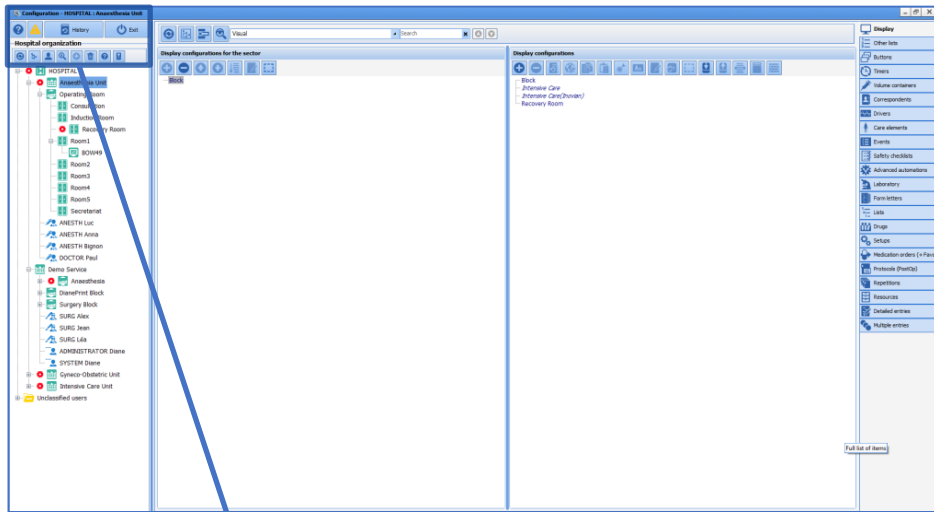

- 1 **Far-right pane:** Access to the various setup tabs
- 2 **Drop-down menu:** Specify the type of setup to be made
- 3 **Far-left pane:** Select where to apply the current setup in the tree structure

Middle panes:

- 4 **Left:** Items copied to the area selected in 3
- 5 **Right:** Exhaustive list of all the items available in the software

Icons

Icons

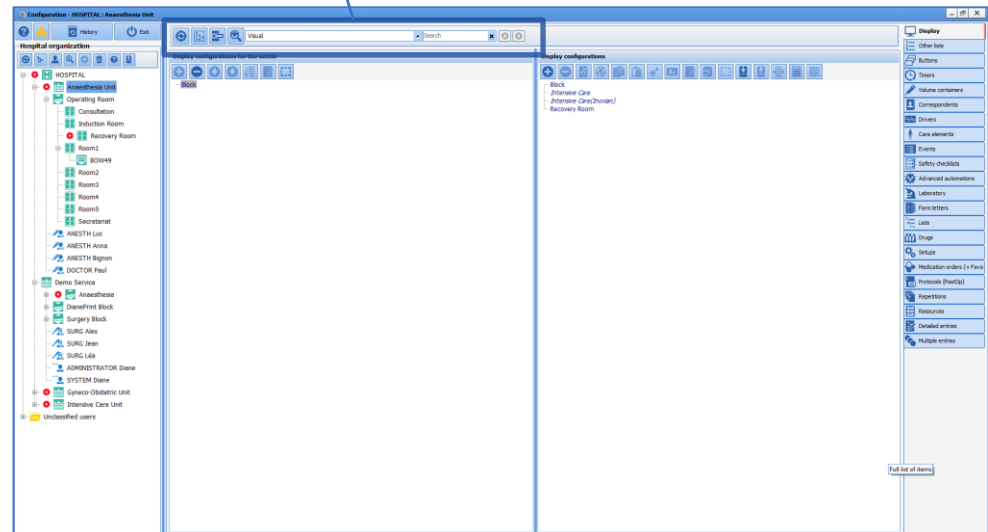

- 1 **HELP**
- 2 **Data field management**
- 3 **Change history**
- 4 **Exit the configuration tool**
- 5 **Refresh the tree structure**
- 6 **Expand the entire tree structure**
- 7 **Hide users**
- 8 **Open the tree structure search window**
- 9 **Create a new configuration**
- 10 **Delete the selected configuration**
- 11 **Icon legend**
- 12 **Export the tree to a file**

Icons

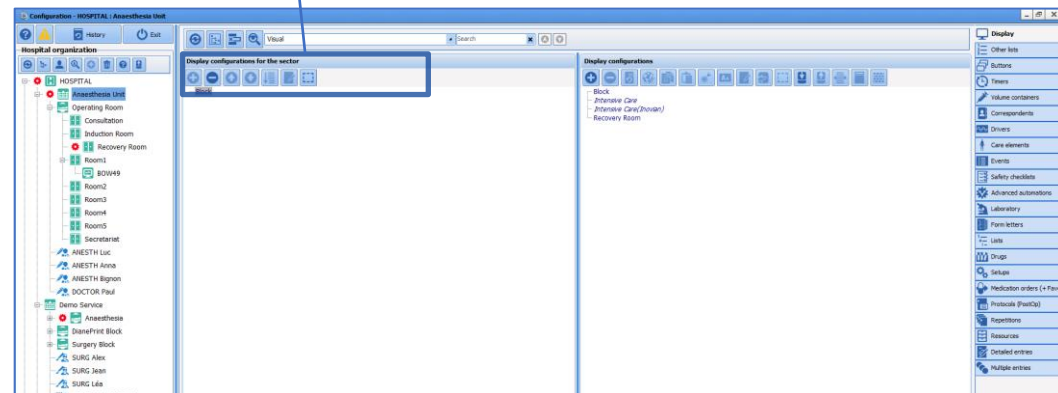

- 1 Refresh the list
- 2 Expand the selected list/tree structure
- 3 Show/hide deleted items
- 4 Display the **configured item(s)**
- 5 Search tool
- 6 Previous result
- 7 Next result

Icons

- 1 Add an item to the area
- 2 Delete the selected item from the area
- 3 Move up the item in the list
- 4 Move down the item in the list
- 5 Sort the list alphabetically
- 6 Edit the item for this area
- 7 Deselect the items

Cogwheels

Cogwheels

Cogwheels are used to isolate an area, room or computer and **assign a specific configuration** to it.

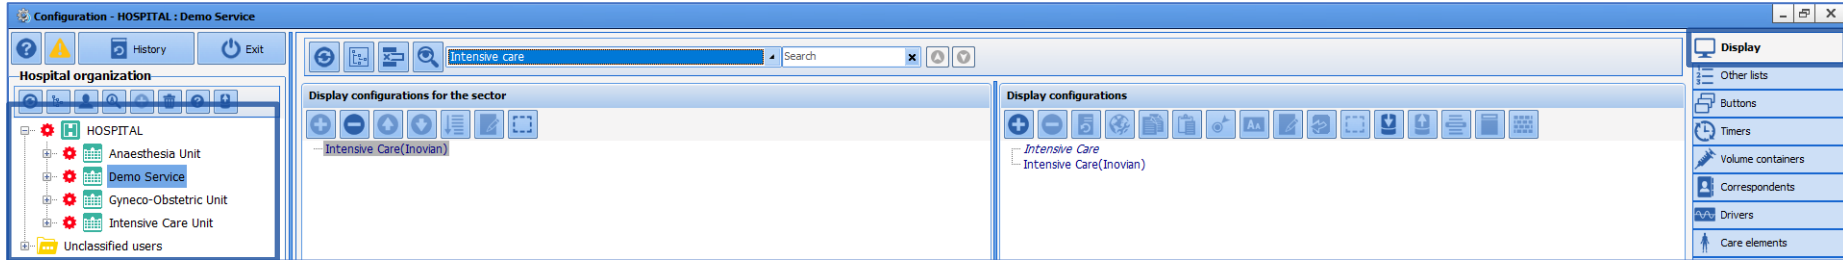

Too many cogwheels will make it difficult to maintain the configuration.

Cogwheels are applied per setup tab.

As a result, a single configuration can be applied to various areas.

The right-hand pane is the same for everyone ('the available shop'). The left-hand pane determines what is visible in each area ('the shop window').

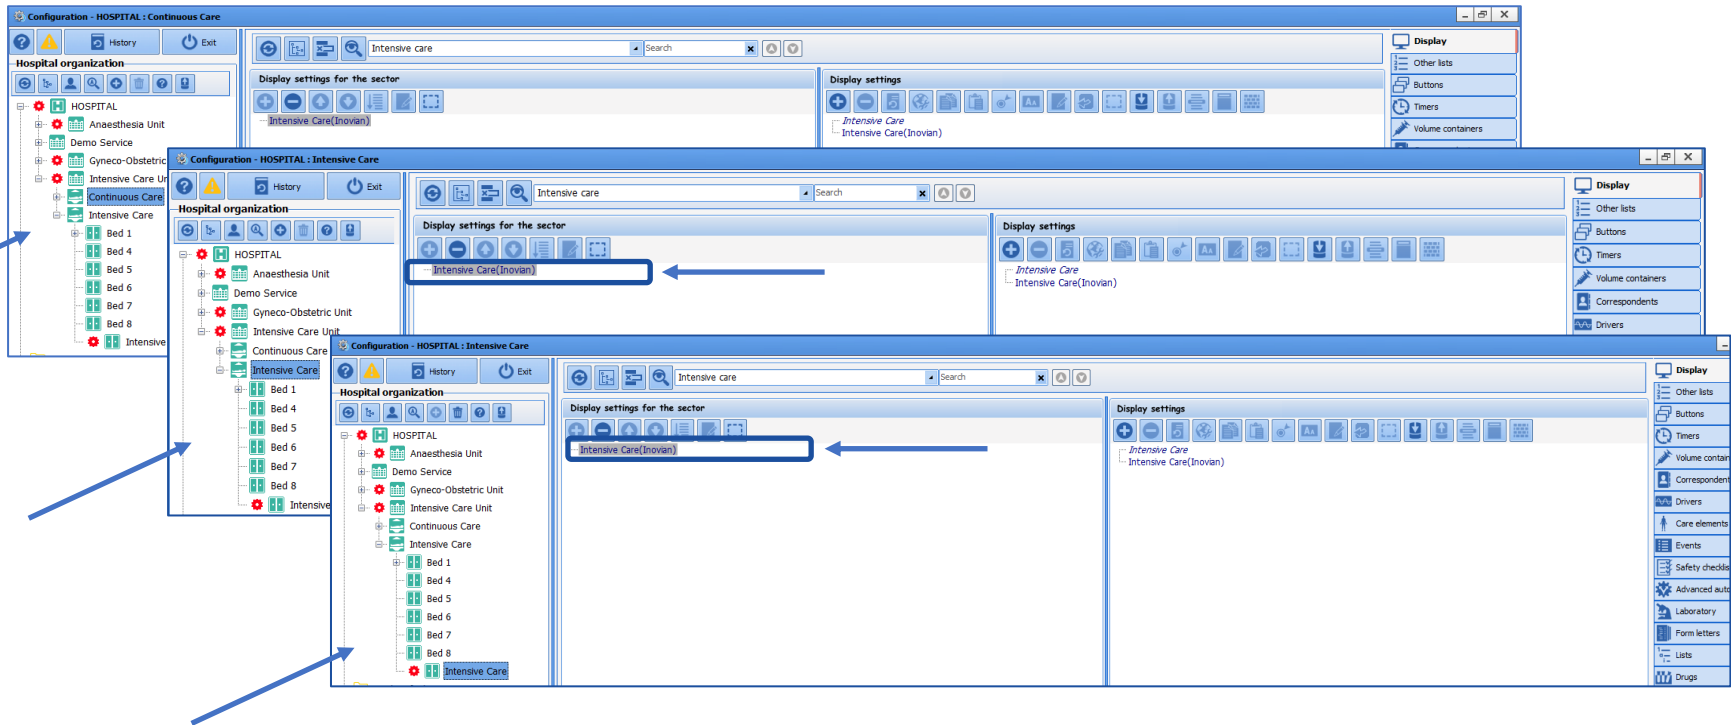

Cogwheels

Example 1: *Display* tab

The Anaesthesia and ICU units each have a cogwheel. This allows them to have at least one different configuration item each.

Cogwheels

The display configuration associated with the cogwheel next to the **ICU unit** is used for the both the ICU and the post-operative ICU.

However, the CCU has its own cogwheel and therefore its own display configuration.

Cogwheels

The screenshot displays the Cogwheels software interface, which is used for configuring hospital protocols. It features a hierarchical tree view on the left for 'Hospital organization' and two main panels on the right for protocol configuration. The top panel is titled 'Configuration - HOSPITAL : Intensive Care Unit' and the bottom panel is titled 'Configuration - HOSPITAL : Intensive Care Unit'. Both panels show a list of protocols under 'Visible multiple entries in the selected area' and a 'Full list of multiple entries' on the right. A blue arrow points from the 'Intensive Care Unit' in the tree to the top panel, and another blue arrow points from the 'Intensive Care Unit' in the tree to the bottom panel, illustrating how different units can have different sets of protocols.

Example 2: Multiple Entries tab

As areas/units do not have the same needs, cogwheels allow each one to use the multiple entries it needs.

→ Right-hand pane: entries available to the entire facility

→ Left-hand pane: entries specific to each unit

Creating a cogwheel

- Right-click the desired location
- Create a new configuration**
- Accept the confirmation request
- AGREE TO RETRIEVE A COPY OF THE FIRST CONFIGURATION FOUND**

Note: Applying a cogwheel to the computer you are working on lets you 'isolate' it so that you can test settings without affecting the other users.

A few rules setup rules

A few rules setup rules

- Settings are **defined in the right middle pane**.

The left middle pane displays what is copied to the selected area.

- Deleting an item **does not completely erase it** from the database. This allows past records to be viewed (a deleted item can be restored if necessary).

EXCEPTIONS: safety checklists and form letters.

- **You must rename an item before deleting it** (e.g. zzz/Old...).

You can then reuse the name.

A few rules setup rules

- Settings **other than display settings** can be defined while the module is being used. This is because the display settings will be applied to all other users by the last person who saves them.
- Working on a **copy** allows you to start over.
For the display > Right-click: past version history
- Tip: Create a **common base configuration**, duplicate it and work on each iteration. Do this as late as possible.

A few rules setup rules

- **Double click an item in the left-hand pane** to select it in the right-hand pane (makes searching easier).

-  **Click the magnifying glass** to make the right-hand and left-hand lists the same (the left-hand list will be duplicated).

- Type a word in the **search engine** to see the number of times it occurs and display it.

Click the arrows on the right or press F3 to go from one occurrence to the next.

A few rules setup rules

Primary/mirror computers

- Primary computer: located in a patient's room
- Mirror computer: all other computers with access to DIANE but not dedicated to a patient.

Setup can be configured from both primary and mirror computers.

Once finished: select **DIANE MANAGER/REBOOT DIANE** on the **primary computer** to apply the last configuration set.

Tabs: presentation and setup

- Events
- Buttons
- Timers
- Lists
- Drugs
- Detailed Entries
- Component setups
- Multiple Entries
- Laboratory
- Medication Order (+ Favourites)
- Volume containers

Events tab

Events tab

The titles of the main parts are not editable

The display order can be changed in the left-hand site.

- Complications
- Consumables
- Patient environment
- Events
- Samples

Events tab

Creating/adding an item

- Select the part** under which the new event is to be placed
- Click 
- Enter the item's **name**
- Select an **icon** and a **particular behaviour** (optional)
- Copy it** into the desired area

Events tab

Event behaviour management

- 1 Prohibits the entry of a timer end event if the time start event has not been entered.

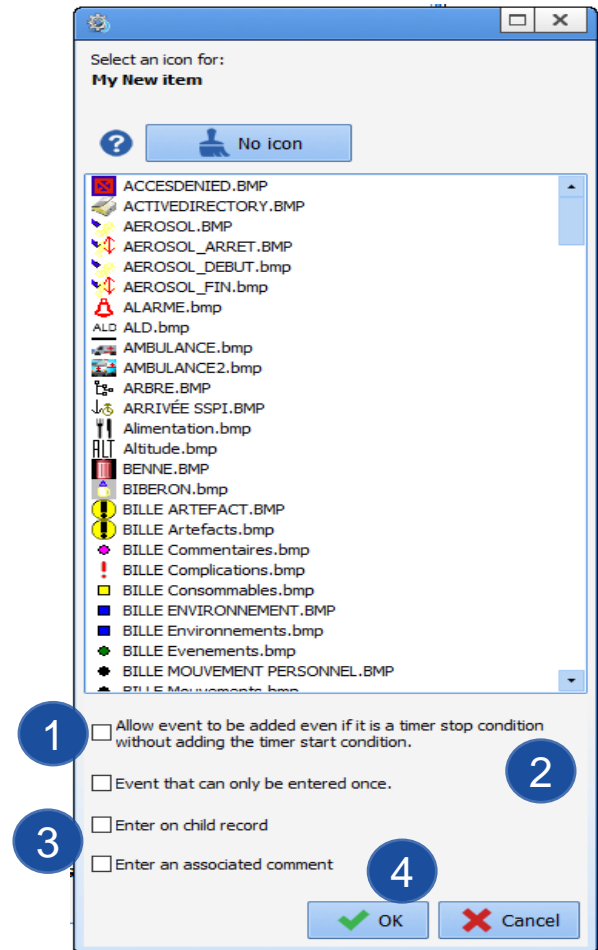

Example: in order to extubate a patient who has arrived intubated or deflate a pre-hospital tourniquet.

- 2 Prevents making **duplicate entries** by mistake.

Example: death

- 3 Used for the obstetrics module.

- 4 Automatically opens a **free comment window** that will be associated with the entered item. *Example: traceability purposes.*

Buttons tab

Buttons tab

- Access to all buttons created in the software

- **Buttons are created directly from the items** in the various configuration tabs:
 - Drugs

Timers tab

Timers tab

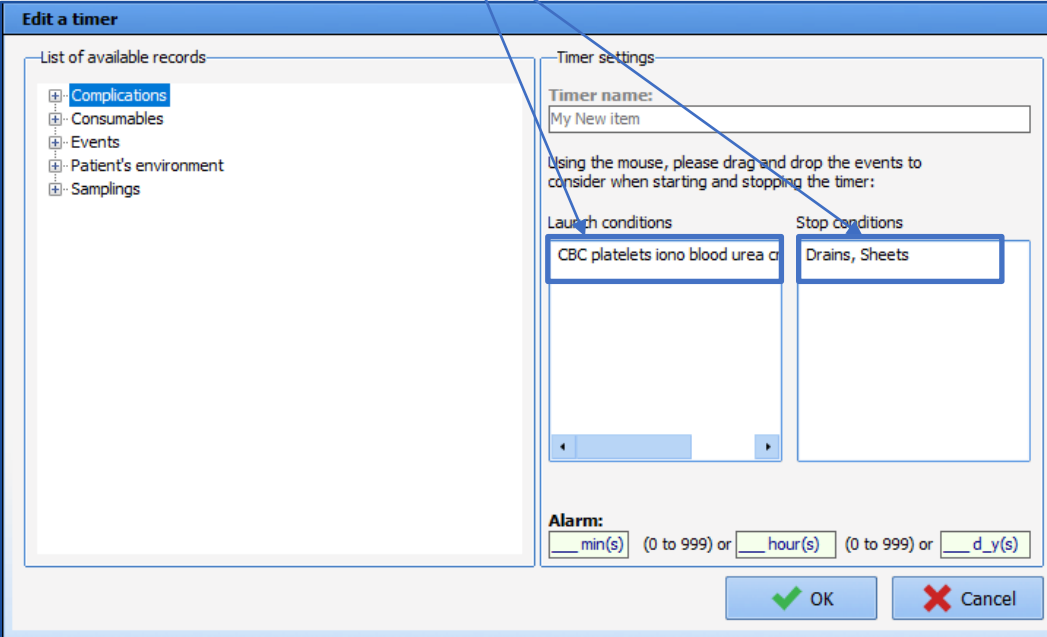

Items that can be associated with times are located in the **Event** tab:

- Complications
- Consumables
- Patient Environments
- Events
- Samples

Timers tab

Creating a timer

- ❑ Click 
- ❑ **Name** the timer
- ❑ Select the **start and end item(s)**
- ❑ Then **drag and drop** into the designated areas.

Edit a timer

List of available records

- Complications
- Consumables
- Events
- Patient's environment
- Samplings

Timer settings

Timer name:
My New item

Using the mouse, please drag and drop the events to consider when starting and stopping the timer:

Launch conditions

CBC platelets iono blood urea c

Stop conditions

Drains, Sheets

Alarm:
___ min(s) (0 to 999) or ___ hour(s) (0 to 999) or ___ d_y(s)

OK Cancel

Timers tab

A timer can be started and stopped by multiple items.

A **visual alarm** can be created by entering a duration at the bottom.

The screenshot shows a dialog box titled "Edit a timer" with two main sections: "List of available records" and "Timer settings".

List of available records: A list of categories with expandable icons:

- Complications
- Consumables
- Events
- Patient's environment
- Samplings

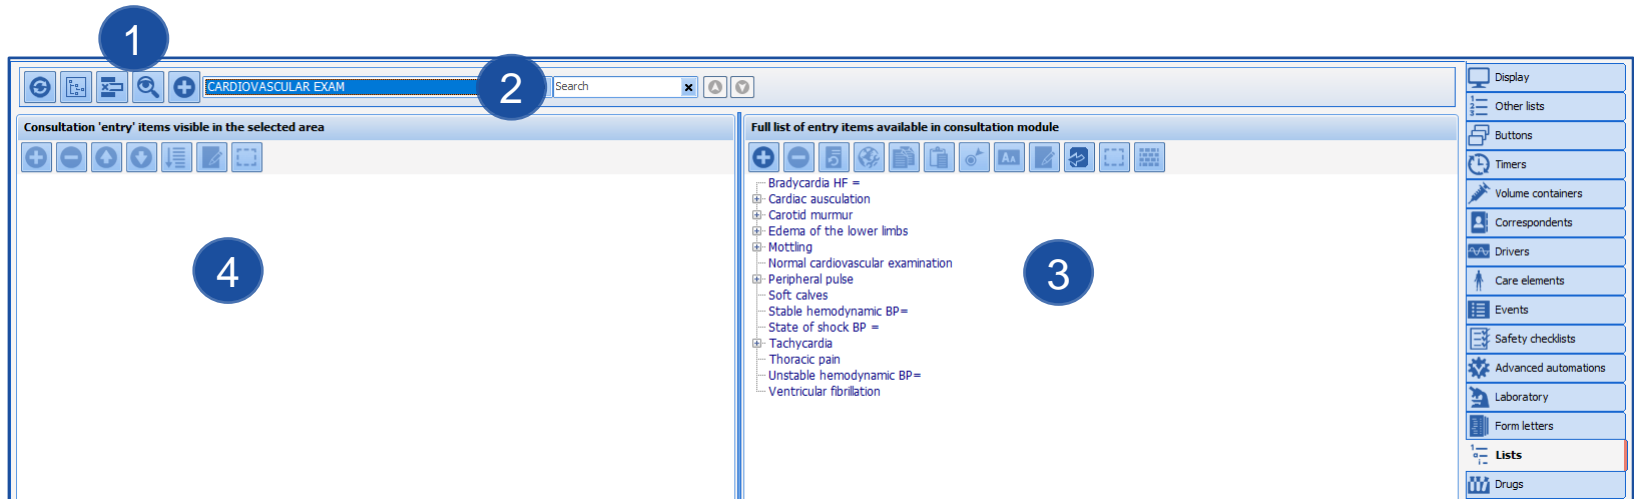

Timer settings:

- Timer name:** A text input field containing "My New item".
- Instructions:** "Using the mouse, please drag and drop the events to consider when starting and stopping the timer:"
- Launch conditions:** A list box containing "CBC platelets iono blood urea cr".
- Stop conditions:** A list box containing "Drains, Sheets".
- Alarm:** A section with input fields for duration: "960 min(s) (0 to 999) or 16_hour(s) (0 to 999) or ___d_y(s)".

At the bottom right, there are two buttons: "OK" (with a green checkmark) and "Cancel" (with a red X).

Lists tab

Lists tab

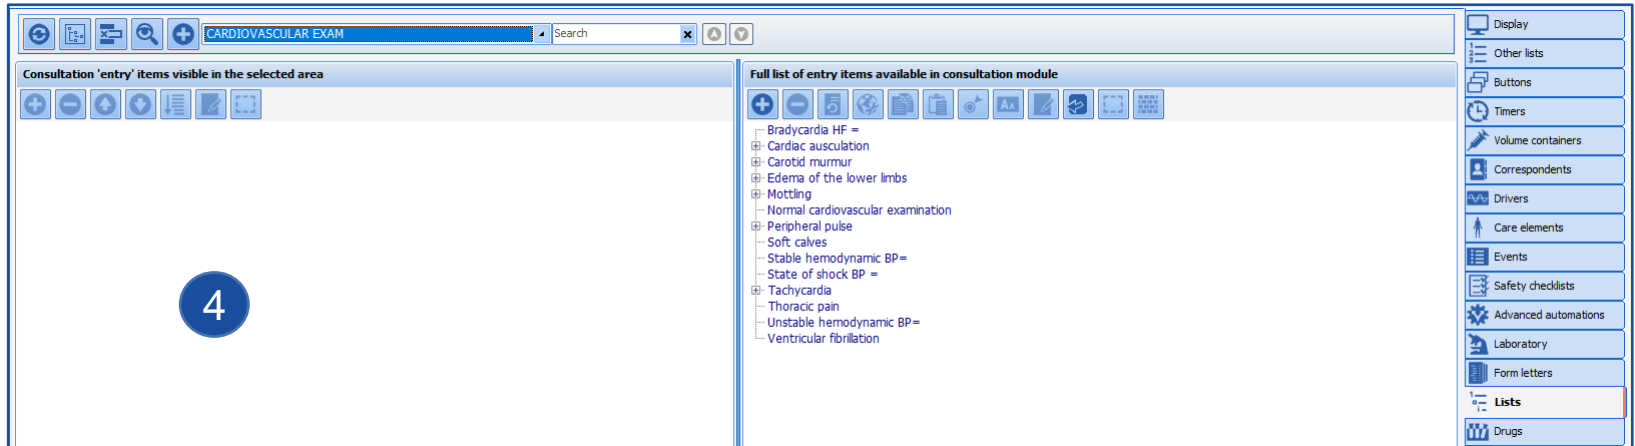

1 Create a new list by clicking  → List name = **reference root** name

2 Drop-down menu gives access to **all pre-existing lists**

3 Items in the list selected in 
Add and remove items by clicking the   buttons

 Before adding an item, be sure to select its location first

Lists tab

4 All items in the list copied to the area

Use  to rearrange their display order:

 **Move up** the selected item in the display order

 **Move down** the selected item in the display order

 Sort the list **alphabetically**

Lists tab

Lists are used in *'entry fields with reference list'* components. A list is assigned when setting up the component:

1 These lists are always **'consultation'** lists.

Column 2 general list	Consultation
Column 2 reference root	CARDIORESP EXAMS

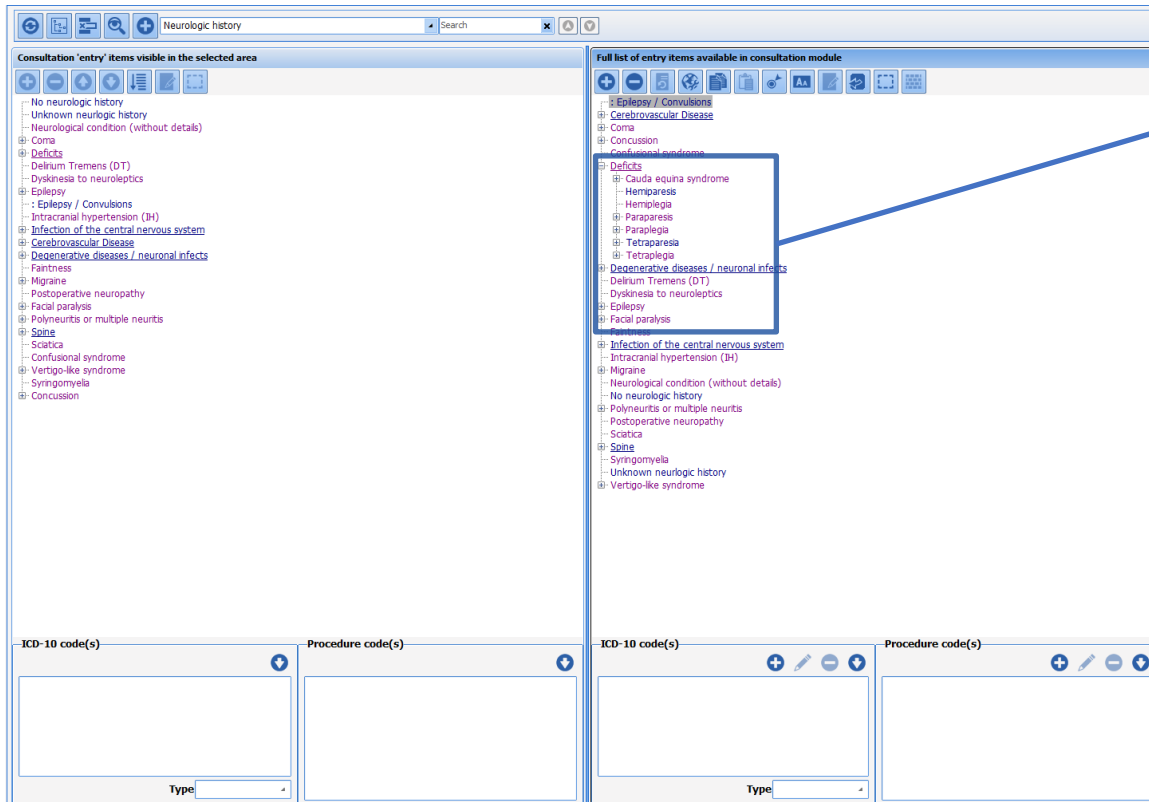

2 The *Root* is the **name of the list**:

It can be found in the top drop-down menu of the **LISTS** tab
(the parent component is given in brackets)

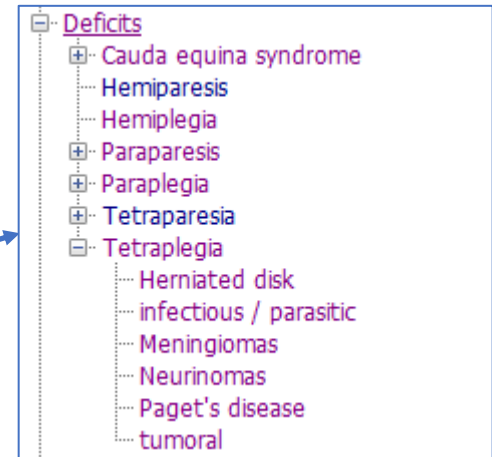

Lists tab

Applying a selector  to a parent item will 'hide' it from users.

The screenshot shows a software interface with two main panels. The left panel, titled 'Consultation 'entry' items visible in the selected area', displays a hierarchical list of medical conditions. The right panel, titled 'Full list of entry items available in consultation module', shows a more detailed view of the 'Deficits' category. A blue box highlights the 'Deficits' category in the right panel, and a blue arrow points from this box to a larger, detailed view of the 'Deficits' list on the right. Below the panels are four input fields for 'ICD-10 code(s)' and 'Procedure code(s)', each with a 'Type' dropdown menu.

- Deficits
 - + Cauda equina syndrome
 - ... Hemiparesis
 - ... Hemiplegia
 - + Paraparesis
 - + Paraplegia
 - + Tetraparesia
 - Tetraplegia
 - ... Herniated disk
 - ... infectious / parasitic
 - ... Meningiomas
 - ... Neurinomas
 - ... Paget's disease
 - ... tumoral

For example, 'Impairments' will encompass its daughter branches ('hemiparesis', 'hemiplegia', etc.) but its name will not appear to users. Only 'Paraplegia' and not 'Paraplegia Impairments' will appear.

Drugs tab

Drugs tab

The three main parts:

- **Fluid balance** (*blood loss, diuresis, etc.*)
- **Drugs** (*used in the OT*)

Sometimes used in the ICU (bolus, feeding, etc.)

- **Blood products** (*RBC, platelets, etc.*)

Only labile blood products are used in the ICU (blood derivatives are in the drug formulary).

The following are possible for each category:

- create new items
- create new dosages or concentrations

Drugs tab

Colour legend:

- No configured dosages and no configured medication orders
- At least one configured dosage and no configured medication orders

Drugs tab

Example: Creating Flexi-Seal flushing

→ Corresponds to a **fluid balance** entry.

Drugs tab

Click the drug's pencil icon to edit the drug's packaging type/dosage. **MAKE SURE** that the information is accurate, otherwise medication order will be invalid and irretrievable.

If you mark a dilution as mandatory, you can enter the diluent(s) that will be suggested for medication orders.

Change of dosage/dilution/product packaging

ACEBUTOLOL BGA 400MG CPR

Expressed in quantity of product packaging
Please enter a value and a unit
example: '250 mg' (tablet) '200 IU' (10 mL), '5 mol' (per mL)

15 U

Packaging or volume per packaging
Please enter a value (default: 1) and a unit
example: '10 mL', '(1) tablet', '(1) dose', '(1) puff...

1 tablet

Mark product as dilutable without an associated preparation volume

Be careful, changing the dosage leads to loss of links with the drug bank. Calculation of certain interactions and maximum doses per day will no longer be possible. To restore the initial dosage, use the button below.

Restore imported dosage from DDB

Dilution

Dilution required

SODIUM OXYBATE 242 mg/ml solution for injection

Minimum concentration 0 U/tablet

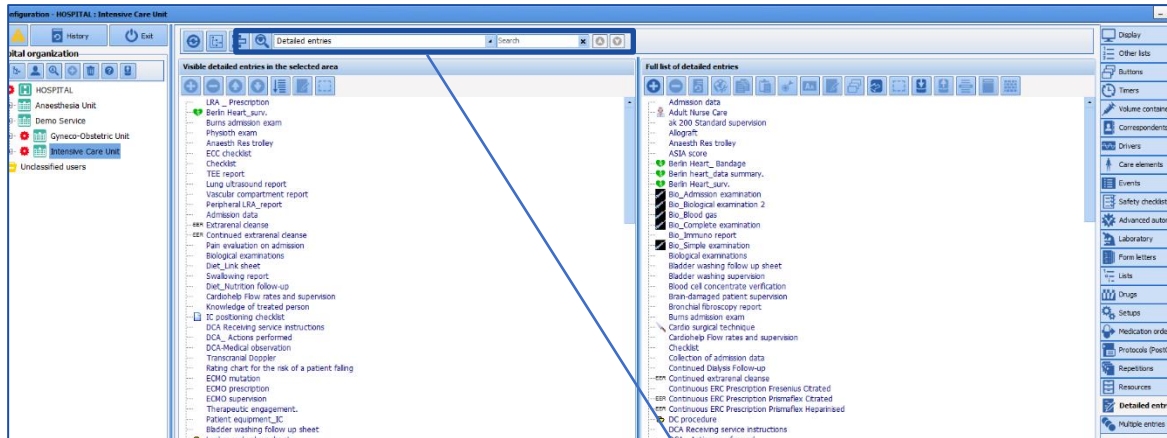

Old dosage: 15 U/tablet (Dosage "securable" by Vidal)

New dosage: 15 U/tablet

OK Cancel

Detailed Entries tab

Detailed Entries tab

Used in ICU settings:

- Detailed entries
- Scores

Once a detailed entry is in use, it can no longer be edited

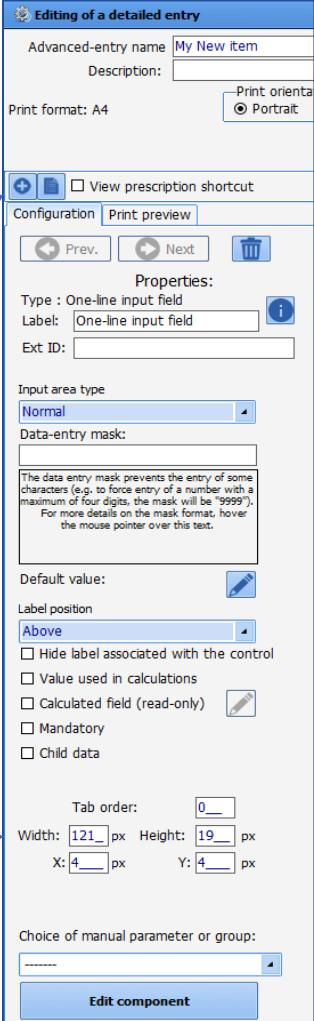

➔ **Duplicate** it and work on the **copy**.

Note: If you edit a detailed entry and information has been retrieved from elsewhere in the record, you must edit this information everywhere (examples: form letters, eye, etc.).

Detailed Entries tab

Creating a detailed entry

- Click 
- **Name** the detailed entry
- Create the form using the components shown
- Position each component by **dragging and dropping** it
- To adjust the size and position of the components, use:
 - the mouse
 - or enter the Width/Height or X/Y

Subscore

- Select the score to add

The image shows a software interface for creating a medical form. On the left is a 'Properties' panel for a 'Subscore' widget. It includes fields for 'Label' (EVA) and 'Ext ID'. Below these is a 'Score selection' dropdown menu with 'EVA' selected. At the bottom of the panel are 'Tab order' and dimension settings (Width: 380 px, Height: 98 px, X: 30 px, Y: 390 px).

The main form area on the right is titled 'PRESCRIPTION FOR BACTERIOLOGICAL EXAMEN'. It contains several sections: 'Weight' (70 kg), 'Illness History' (empty text area), 'Birth date' (calendar icon), 'Age' (input field), 'Birth location' (AMIENS), 'URGENT' checkbox, 'Aerious ways access' (checkbox group with Low, Yes, Average, Other options), 'Family History' (checkbox group with Pathology, Relation options), 'Leukocytes' (dropdown menu), and 'Chemoprophylaxis' (Yes/No radio buttons). A 'Value' section at the bottom contains the text 'VAS : VISUAL ANALOGUE SCALE (VAS) . . . Self-evaluation scale.' and a numeric input field with '123'. A 'Button' is located at the bottom right of the form area.

Detailed Entries tab – *Score type*

A **description** can be added to a **score value**:

- ❑ Click the ‘Edit score value information’
- ❑ ‘No pain’ is displayed when the score equals ‘0’

The screenshot displays the 'Editing of a detailed entry' window. The main area shows the configuration for a 'Visual Analogue Scale (VAS)'. The 'Description' field is set to 'Visual Analogue Scale'. The 'Advanced calculation' tab is selected, and the 'Edit score value information' icon (an 'i' in a blue square) is highlighted with a blue box and an arrow pointing to the 'Edition of informations for scores value' dialog box.

The 'Edition of informations for scores value' dialog box is open, showing a table with two columns: 'Score value' and 'Description'. The table is currently empty, and there is an '+ add' button at the top right. The dialog also has 'Delete', 'Save', and 'Cancel' buttons at the bottom.

In the background, the VAS configuration window shows a list of options for the 'VAS' type, including 'No pain', 'Mid pain', 'Moderate pain', 'Severe pain', and 'Very strong pain'. The 'No pain' option is selected, and it is highlighted with a green box. The 'Self-evaluation scale' is also visible in the background.

Detailed Entries tab – *Score type*

Example of a detailed entry and its display
in the care plan

The screenshot displays two overlapping windows from a medical software interface. The top window, titled "Detailed entry", is for a "New record" of a "Visual Analogue Scale (VAS)" with a score of "0". It shows the entry date as "01/09/2021" at "10:27:31" and the user as "Diane SYSTEM". The "List of records" section shows a "VAS" entry with a score of "0". The bottom window, titled "Care plan", shows a "Monitoring" tab with a "VAS" entry highlighted. The "VAS" entry is displayed as a score of "0" in a table. The interface includes a navigation bar with icons for Monitoring, Events, Consultation, Prescriptions, and Care plan. The "Care plan" tab is active, and the "VAS" entry is highlighted in the table. The "VAS" entry is displayed as a score of "0" in a table. The interface includes a navigation bar with icons for Monitoring, Events, Consultation, Prescriptions, and Care plan. The "Care plan" tab is active, and the "VAS" entry is highlighted in the table.

Detailed entry window:

- Visual Analogue Scale
- Entered by : Diane SYSTEM
- Occurrence date: 01/09/2021 10:27:31
- Score: 0
- Self-evaluation scale.

Care plan window:

- Monitoring
- Events
- Consultation
- Prescriptions
- Care plan
- Monitoring Care plan Timers ECMO Therap.
- EVA
- EVA

Detailed Entries tab – *Calculated field*

*Example: We want to know the value of the intravesical pressure in mmHg.
The value given by the measurement tool gives the result in cmH2O.*

Two simple entry fields must be created:

- One to **indicate the result obtained by the measurement tool**
- The other to **display the value of the result following the calculation**
→ this field will be a calculated field (read-only)

Calculated fields are available in all types of detailed entry.

The screenshot displays the configuration interface for a detailed entry. The main configuration area includes:

- Advanced-entry name:** New item2
- Description:** (empty)
- Print format:** A4
- Print orientation:** Portrait (selected), Landscape
- Advanced calculation:** (button)
- Role able to confirm/edit the AE:** Undefined

The **Configuration** tab shows the following settings:

- Navigation:** Prev., Next, and a trash icon.
- Properties:**
 - Type: One-line input field
 - Label: Else
 - Ext ID: (empty)
- Input area type:** Normal
- Data-entry mask:** (empty)
- Default value:** (empty)
- Label position:** On the left
- Hide label associated with the control
- Value used in calculations
- Calculated field (read-only)
- Mandatory
- Child data

The **Print preview** shows a grid with two input fields: 'IPV' (value: cmH2O) and 'Else' (value: mmHg). The 'Else' field is highlighted with a green border, and a blue arrow points from the 'Calculated field (read-only)' checkbox in the configuration panel to this field.

Detailed Entries tab – *Calculated field*

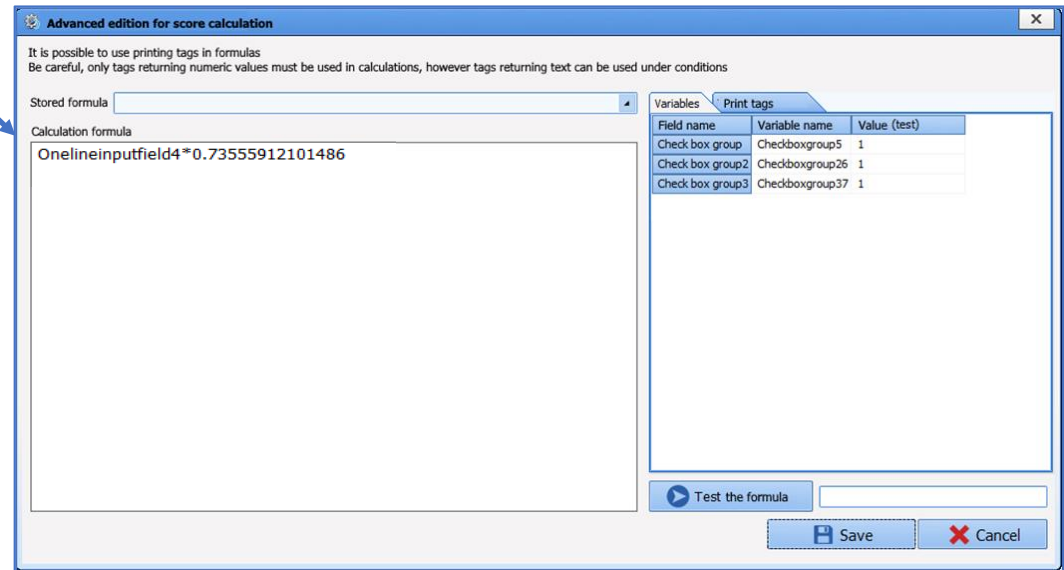

- ❑ Click the Calculated Field button
- ❑ The same setup window as for the advanced calculation opens

Given that $1 \text{ cmH}_2\text{O} = 0.73555912101486 \text{ mmHg}$

The advanced calculation will be:

the value entered in the IP simple entry field multiplied by 0.73555912101486

Or: $\text{IP1} \times 0.73555912101486$

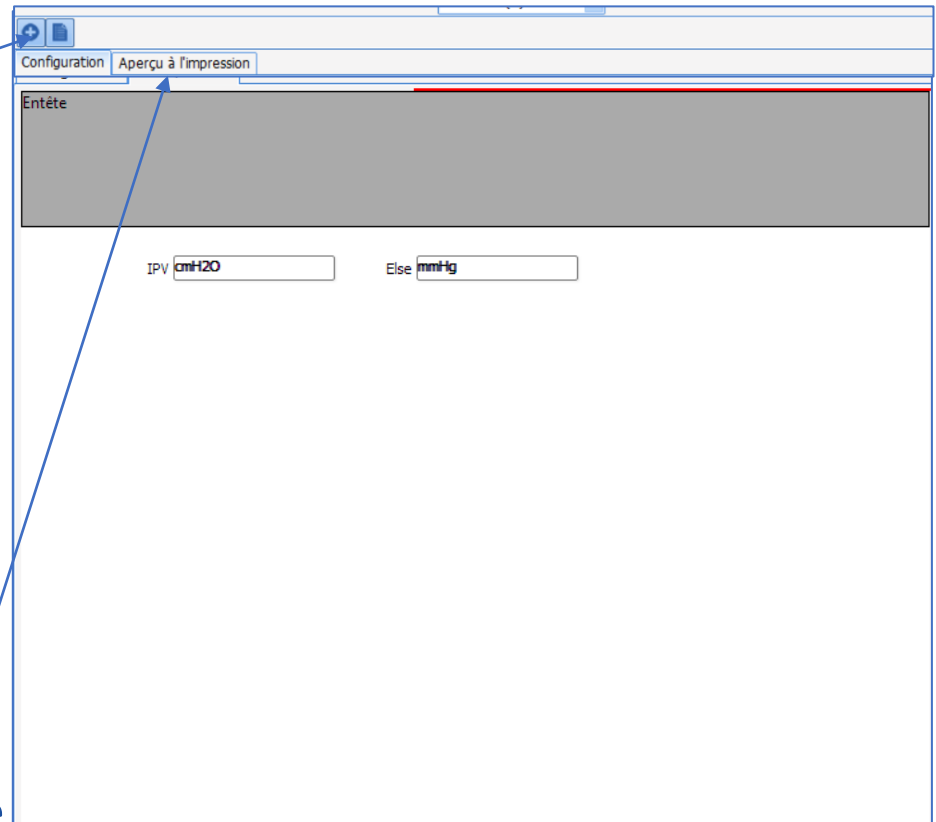

Detailed Entries tab

Remember to set the **tab** when you finish creating the entry 

This will make it easier for users to enter data with a keyboard. 

The tab order also affects **how data is displayed** in the **care plan** and **form letters**

The **Print preview** tab allows you to see the final product.

Multiple Entries tab

Multiple Entries tab

Prerequisites

- Used to pool together various items in the same entry
- The necessary items (events, consumables, drugs, etc.) have to be **created beforehand**
- These items must be the same as those configured in the **care plan display** so that the care plan is completed as each multiple entry is made.

Multiple Entries tab

Creating a new multiple entry

- Click 
- Enter the multiple entry's **name**
- Create** the multiple entry
- Copy it** into the desired area

- 4 Right-click menu: **delete** or **position** the row
- 5 Time offset management
- 6 Management of **linked multiple entries**
- 7 Management of **alternative multiple entries**
- 8 Save/Cancel

The screenshot shows the 'Multiple entry editing' window. At the top, there is a text field for the 'Name of multiple entry' (Analgésique) and a 'Time reset' button. Below this is a grid of buttons for 'Drug', 'Environment', 'Sample', 'Detailed entry', and 'Separator'. A 'Consumable' section contains a table with columns for 'Event', 'Complication', 'Multiple entry', 'Manual entry', and 'Care item'. The table lists various drugs and their dosages, such as Paracetamol (IV PERF 1000 mg), Ketoprofen (Profenid) (IV PERF 50 mg), and Ketamine (Ketalar) (DIV 10 mg). A right-click menu is open over the Ketamine row, showing options like 'Delete', 'Before', and 'After'. At the bottom, there are two sections: 'Chained multiple entries' and 'Alternative multiple entries', each with 'Add', 'Delete', 'Move up', and 'Move down' buttons.

Multiple Entries tab

4 Right-click menu options:

- **Delete** the row
- **Position** the row (by moving it up or down)

The screenshot shows the 'Multiple entry editing' window. At the top, there are tabs for 'Drug', 'Environment', 'Sample', 'Detailed entry', and 'Separator'. Below these are buttons for 'Time reset', 'Save', and 'Cancel'. The main area contains a table of drug entries with columns for drug name, route, and time. A right-click menu is open over the 'Ketamine (Ketalar)' row, with the 'Delete' option highlighted. At the bottom, there are two sections: 'Chained multiple entries' and 'Alternative multiple entries', each with 'Add', 'Delete', 'Move up', and 'Move down' buttons.

Drug	Environment	Sample	Detailed entry	Separator	Time reset	Save	Cancel
Consumable	Event	Complication	Multiple entry	Manual entry	Care item		
<input type="checkbox"/> ANTALGICS	Paracetamol		IV PERF 1000 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Nefopam (Acupan)		IV PERF 20 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Ketoprofen (Profensid)		IV PERF 50 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Norrflumate (Nifur)		Rectal route 400 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Ketamine (Ketalar)		DEV 10 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Parecoxib (Dynastat)		DEV 20 mg			+ 0:00:00	
<input type="checkbox"/> ANTALGICS	Morphine chlorhydrate (Morphine)		Epidural route 2 mg			+ 0:00:00	
<input type="checkbox"/> LOCAL ANAESTHESIA	Lidocaine (Xilocaine), non adrenaline		Epidural route 10 mg/ml 1			+ 0:00:00	
<input type="checkbox"/> LOCAL ANAESTHESIA	Ropivacaine (Naropen)		INFILTR 7,5 mg/ml 20 ml			+ 0:00:00	
<input type="checkbox"/> GASTROENTEROLOGICAL	Ondansetron (Zophren)		Undefined			+ 0:00:00	
<input type="checkbox"/> GASTROENTEROLOGICAL	Drupadol (Drolopetan)		Undefined			+ 0:00:00	

When you hover the mouse over the end of the row, you can grab the row by clicking the part that turns green and move it by drag and drop.

Multiple Entries tab

5 Time offset management:

Move the sliders to increase or decrease the time offset in relation to the opening of the multiple entry.

The **Time reset** button resets the sliders.

The screenshot shows the 'Multiple entry editing' window. At the top, there is a text field for the 'Name of multiple entry' (1) and a 'Time reset' button (5). Below this is a navigation bar with tabs: Drug, Environment, Sample, Detailed entry, Separator, Time reset, Save, and Cancel (8). A secondary bar contains: Consumable, Event, Complication, Multiple entry, Manual entry, Care item, and Cancel. The main area is a table with columns for drug categories, drug names, routes, and time offsets. A 'Delete' menu is open over the 'Ketamine (Ketalar)' row (3), with options 'Before' (4) and 'After'. At the bottom, there are two sections for 'Chained multiple entries' (6) and 'Alternative multiple entries' (7), each with 'Add', 'Delete', 'Move up', and 'Move down' buttons.

Consumable	Event	Complication	Multiple entry	Manual entry	Care item	Time offset
<input type="checkbox"/> ANALGICS	Paracetamol			Iv PERF 1000 mg		+ 0:00:00
<input type="checkbox"/> ANALGICS	Nefopam (Acupan)			Iv PERF 20 mg		+ 0:00:00
<input type="checkbox"/> ANALGICS	Ketoprofen (Profenid)			Iv PERF 50 mg		+ 0:00:00
<input checked="" type="checkbox"/> ANALGICS	Morphine (Morphine)			Rectal route 400 mg		+ 0:00:00

<input type="checkbox"/> GASTROENTEROLOGICAL	Ondansetron (Zophren)			Undefined		+ 0:00:00
<input type="checkbox"/> GASTROENTEROLOGICAL	Droperidol (Droleptan)			Undefined		+ 0:00:00

Multiple Entries tab

6 Management of **linked multiple entries**:

These multiple entries are suggested to be able to **continue** entry. Click the **Add** button to see the complete list of multiple entries available in the application.

Example: The 'Tour Patient' multiple entry can be linked with the 'Tour Respi' multiple entry.

7 Management of **alternative multiple entries**:

The multiple entries are suggested as a replacement of the one that it open. *Example: the 'Prevention' multiple entry might be needed instead of the 'Tour Patient' multiple entry.*

The screenshot shows the 'Multiple entry editing' window. At the top, there is a text field for 'Name of multiple entry: Analgescop' (1) and a 'Save' button (5). Below this is a tabbed interface with 'Drug' selected. The 'Drug' tab contains a table with columns: 'Drug', 'Environment', 'Sample', 'Detailed entry', 'Separator', and 'Time reset'. The table lists various drugs like Paracetamol, Nefopam, Ketoprofen, Morphine, Lidocaine, and Roivacaine. A 'Delete' button (4) is visible next to the 'Ketamine' row. At the bottom, there are two sections: 'Chained multiple entries' with an 'Add' button (6) and 'Alternative multiple entries' with an 'Add' button (7). A 'Cancel' button (8) is located at the bottom right.

Volumetric Containers tab

Volumetric Containers tab

Used to **configure syringes and bags** (volumes and units of flow) used for medication orders.

The screenshot displays the 'Volumetric Containers' configuration interface. The main window shows a search bar with 'syringe' entered and a list of scheduled items including Syringe 12, Syringe 20, Syringe 24, Syringe 48, and Syringe 50. A secondary window titled 'Edit volumetric container "Syringe 48" (seringue)' is open, showing the following configuration:

- Container name: Syringe 48
- Container type: seringue
- Capacity in mL: 48
- Conventional flow rate unit: mL, drop
- Bolus rate (expressed as the usual flow unit): 200

A secondary window titled 'Ceftazidime 2 g powder for solution for injection (2 g/flask) : 2 g at 250 mg/h (0,04 g/mL) (€14,97)' is also open, showing the medication order details:

- Medication: CEFTAZIDIME 2 g powder for solution for injection
- Dosage per administration: 2 g /kg /m2
- Dosage per day: 2 g
- Flow rate: 250 mg /kg /m2 /min
- Administration duration: 2h
- Administration frequency: 2h, 12h, 8h, 6h, 4h, 3h, 2h, 1h, 30min, Other
- Route: Parenteral use
- Schedule: Once

A vertical bar on the right side of the interface indicates the container capacity of 48 mL.

The maximum capacity represents the additional content allowed in a bag (so that ions may be added, for example).

Setups tab

Setups tab

Used to manage the application's behaviours.

Setups tab > DIANEICU drop-down menu > Edit configuration

The screenshot shows the 'Application setup' dialog box for 'ICU 1280-1024 Vidal_Local_EN'. The 'Application or module to setup:' is set to 'DianeRea'. The 'Parameter search' section includes a 'Text to find' field with 'displayed' and a 'Search' button. Below this is a table with columns 'Parameter description' and 'Parameter value'. The table lists various configuration categories such as 'DianeRea main configuration', 'Syringe pump management', 'Prescription', 'Drugs database management', 'Signatures', 'Configuration of the patient selection window', 'Configuration of the selection window of operation', 'Configuration of the window of manual data input', 'Staff's movement', 'DianeRea colors configuration', '[DEBUG]', 'Warnings', 'Remote Connection', 'Drugs graphics', 'Navigation tab', 'Daily checklist and inter patient file', 'Care plan', 'Targeted transmissions configuration', 'Integrated documents', and 'CCAM/CIM10'. A '+' button is visible in the 'Parameter value' column for the first row. To the right of the table is a 'Parameter properties' section with fields for 'Entry type' (set to 'Section'), 'Possible choices', 'Data-entry mask', and 'Maximum number of characters' (set to 0). There are 'OK' and 'Cancel' buttons at the bottom right of the dialog box. A status bar at the bottom indicates 'Current key: [GENERAL]' and '343 Row(s) loaded in 00 min 00 sec 030 ms.'

Keyword search field

Click the  button to open the setup key rows

The following slides describe keys that can be safely edited.

 Editing any other keys will affect the behaviour of medication orders and the care plan.

Never edit these keys without first contacting Bow Medical.

Setups tab

DianeRea main configuration

- **Request confirmation of the computer's correct location**

Applies to computers placed on trolleys.

Request the confirmation of the location of the computer at the start of per/postoperative	1
--	---

- **Automatic user timeout**

Encourages users to log in correctly each time.

Time period to wait before the automatic closure of the per/postoperative application	120
Time period to wait before the disconnection of the current user	110

Setups tab

- **Prevent the creation of patients not registered in the HIS**

Special case of rooms receiving A&E patients.

Example: creation of an unknown patient admitted to A&E.

- **Prevent the editing of data in the HIS**

The HIS is in control. All changes will be deleted when the record is reopened.

Prevent the creation of patient not attached to HIS	Creation authorized
Prevent the modification of data from HIS	Modification authorized if HIS-ID not filled

- **Patient identity verification banner** (*some information can be added; please contact us*)

Visual upperband display mask	*<PATIENT_CIVILITE> <PATIENTFORMATEDNAMES> <PATIENTPREMIER>
-------------------------------	---

Setups tab

- Patient Details box display setup

Patient informations to display in the prescription tab

"1; 1;Surgical History ;dBlack 1;5;Medical history ;dBlack"
--

Visible in the Medication Orders tab:

Patient information:

Surgical History Tonsillectomy Revision with adenoids, Endoscopy Digestive endoscopy : EUS upper access

Medical history Cataract, Peptic ulcer disease old healed

Allergies:Trimethoprim Sulfamethoxazole (Bactrim)

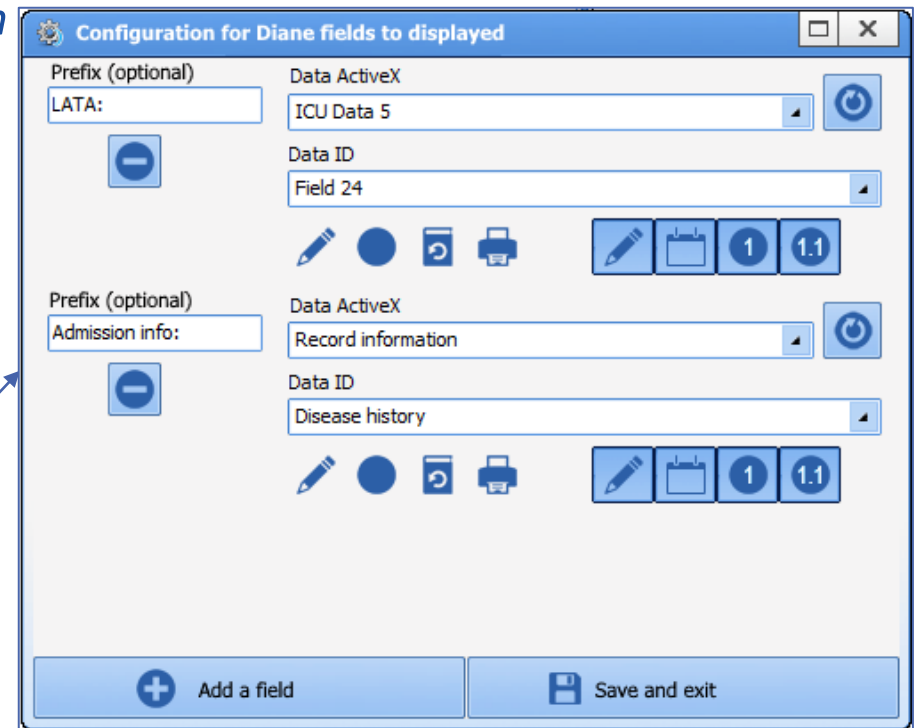

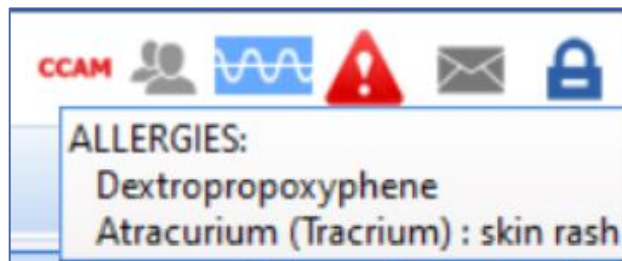

Setups tab

- Record data to be monitored in the patient banner

Données du dossier à surveiller dans le bandeau patient (visibles au survol de l'icone des allergies) "23;24;LATA ;;cBlack||3;8;;cBlack||10;2;Motif admission;cBlack"

For entering information that appears on mouseover of the patient banner

Practical example:

Setups tab

- **Management of the ICU day start time**

ICU/Care plan daily start time (in number of hours from midnight, by default=7)

Care plan display times (Note: determines the time at which the fluid balance is reset)

- **Management of antibiotic prophylaxis**

Antibioprophylaxis management : Allows to enable probabilistic antibiotic prescriptions checks, allows to associate a number 

Used to manage requests for antibiotic evaluation questionnaires

(these questionnaires can be edited and created in the form letters)

Configuration of additional entries for prescription

Veillez cocher les jours pour lesquelles la prescription doit-être complétée:
Pour chaque jour coché veuillez sélectionner le modèle de document et/ou le formulaire souhaité.

Note: You can edit/add document templates via the form letters tab in the configuration tool (section "Linked to a medication order (ICU)")

	Modèle de document :	Fiche interne de validation :
<input checked="" type="checkbox"/> Day 1	<input type="text" value=""/>	<input type="text" value="Initial information (Antibiotic)"/>
<input type="checkbox"/> Day 2	<input type="text" value=""/>	<input type="text" value=""/>
<input checked="" type="checkbox"/> Day 3	<input type="text" value=""/>	<input type="text" value="Evaluation (Antibiotic)"/>
<input type="checkbox"/> Day 4	<input type="text" value=""/>	<input type="text" value=""/>
<input type="checkbox"/> Day 5	<input type="text" value=""/>	<input type="text" value=""/>
<input type="checkbox"/> Day 6	<input type="text" value=""/>	<input type="text" value=""/>
<input checked="" type="checkbox"/> Day 7	<input type="text" value=""/>	<input type="text" value="Re-evaluation (Antibiotic)"/>

Setups tab

Important actions

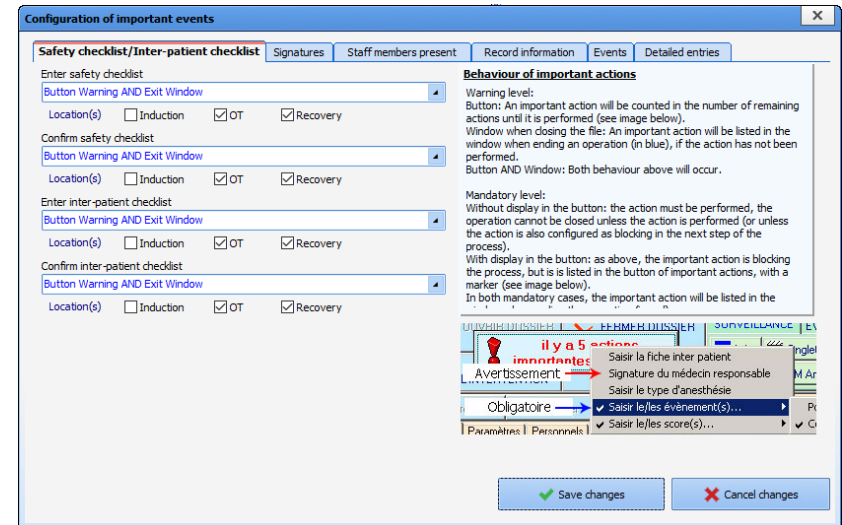

• Important actions

Used to make certain patient-record entries mandatory or not (record information, events and detailed entries)

Example: SAPS II

Do not select 'mandatory', otherwise it will be impossible to close the record.

Setups tab

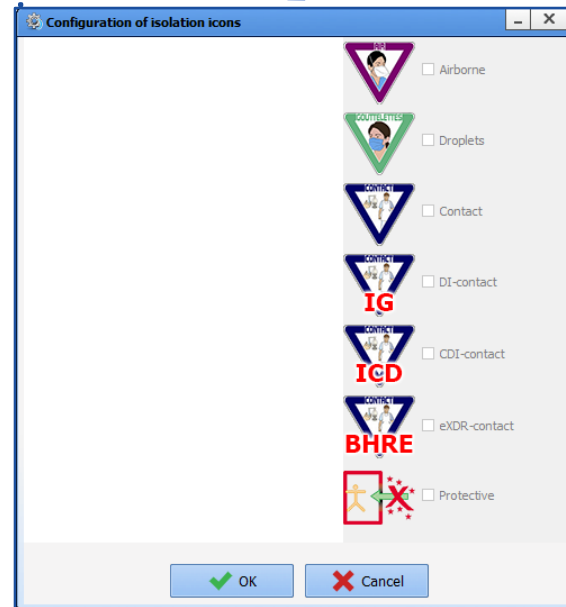

Isolation icons configuration

- Assign one or more icons according to the isolation precaution

The list of isolation precautions can be edited

List tab > root = Rea_isolements.

Setups tab

Configuration of the window of manual data input

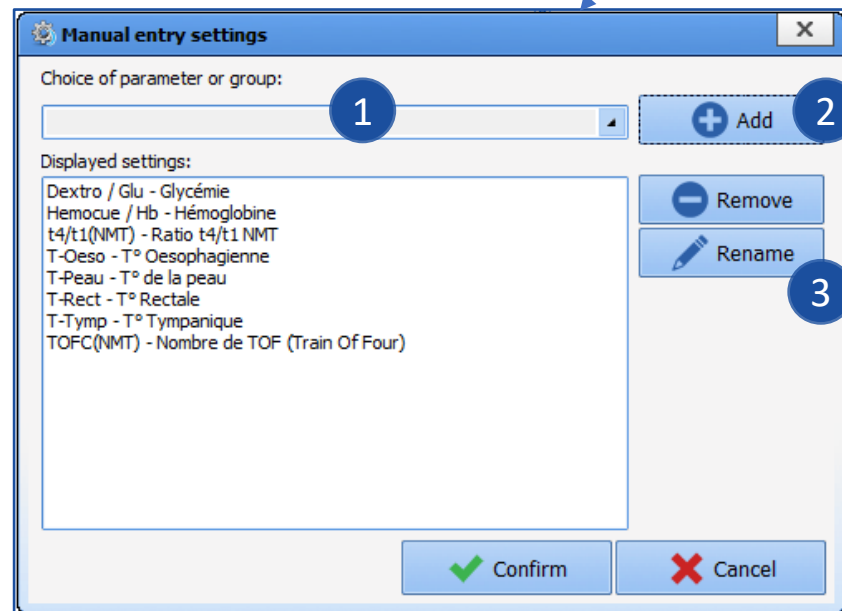

- List the manual data to display:

List of parameters to display | (capillary ketonemia)##30||739=Glu(cap) (Capillary Glycaemia)##16||771=HemoCue (Direct measurement of haemoglobin)##28||...

Used to enter vital signs that are not automatically collected from biomedical devices (e.g. blood sugar).

Adding/deleting manual data:

- 1 **Select** the vital sign to add
- 2 **Click add**
- 3 **Select** the vital sign from the list and click **Rename**

Setups tab

- Set bounds for manual data:

Custom configuration for manual settings (unit and bounds)

Define bounds so that below-normal values appear to users in red.

Define bounds of entries

Configuration for manual settings (unit and bounds)

Choose a parameter
Glycosuria - Glycosuria

Paramètres configurés

Data ActiveX

Data ID Unused only

The display of conflicts is not possible because the configured file is not part of the files of the current configuration.

Data ActiveX/ID
and conflicts

Data ActiveX/ID pair: ESSENTIAL

No AX/ID pair = no storage in database = lost data

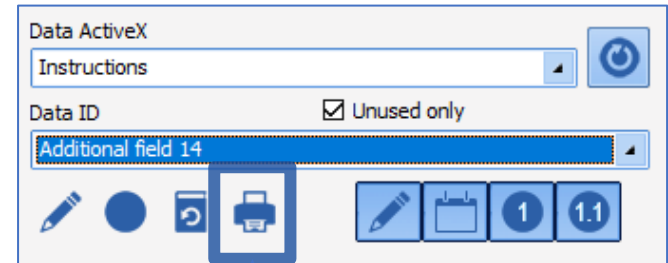

An AX/ID pair allows information to be:

- **stored**
- **retrieved**
- **sent** to another configuration (Intraop/RR/ICU)
- **printed**

Data AX/ID pairs

- Some **AX/ID pairs** have specific purposes: date of birth, BMI, etc.
→ **They cannot be used for other purposes** (see the relevant documentation)
- The ***Unused only*** checkbox is used to show only the free AX/ID pairs in the configuration being used.
- An AX/ID pair can be reused to **duplicate** a component and thus repeat the same information elsewhere in the application.

Generates a **tag** that will be used to setup the form letters (appears on mouseover of the printer icon)

Conflicts

- The Conflict Management window is used to compare the configuration of fields that have the same data AX/ID.

Diane data fields management

Displaying detailed entries (single view)

- 1 Select the detailed entry.
- 2 Select the first or last saved version.

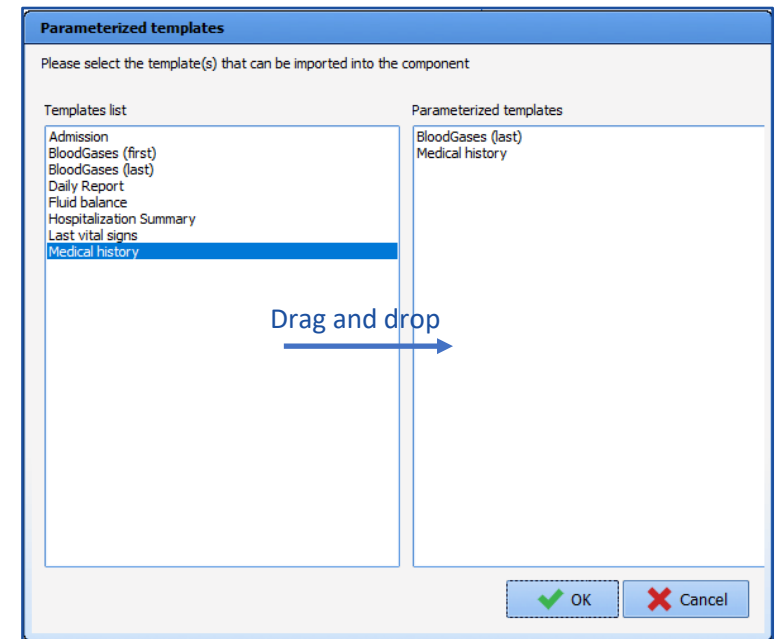

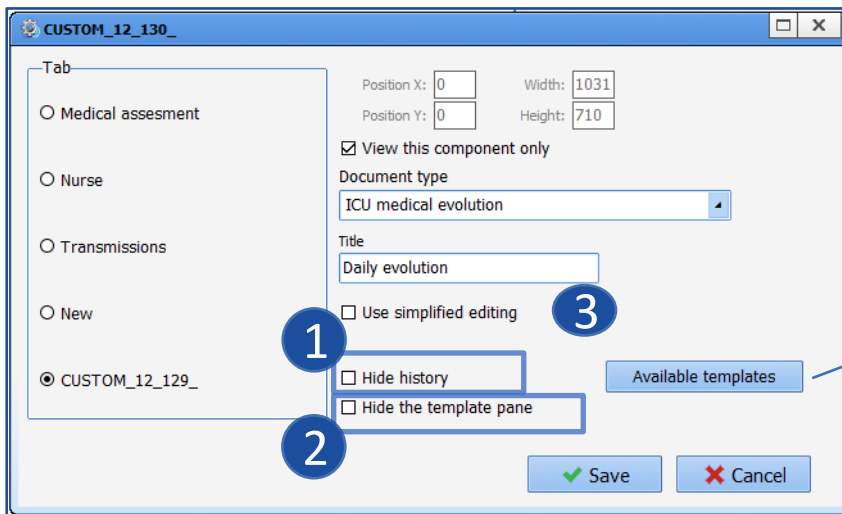

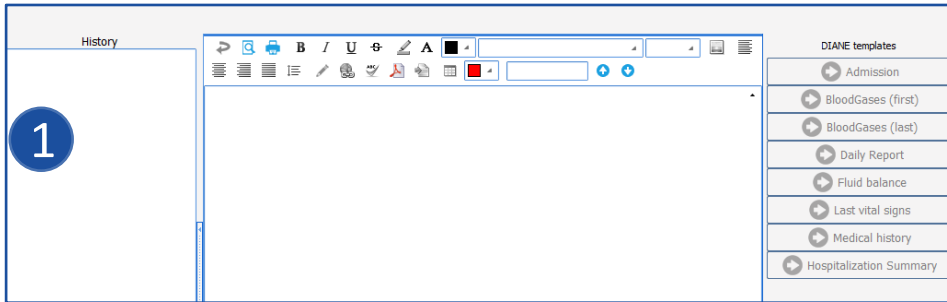

Displaying detailed entries (multiple view)

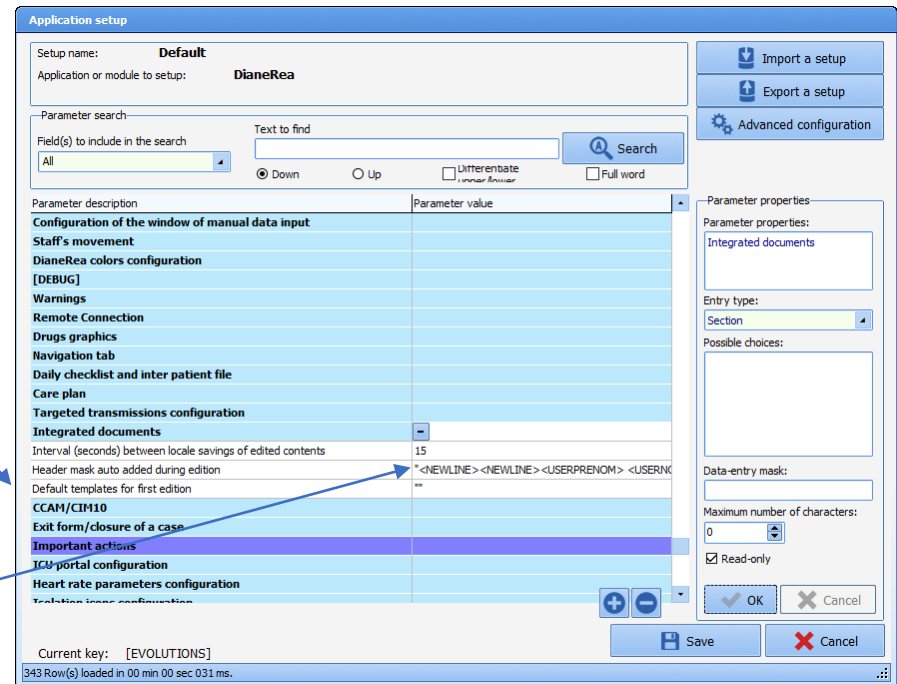

- **1** Select the detailed entry.

Document creation area

Document creation area

- A default template for the first edition can be defined in the setup tab.
- If simplified editing is selected (No 3 available above) with the addition of a header, the mask of this header is set in the setup tab.

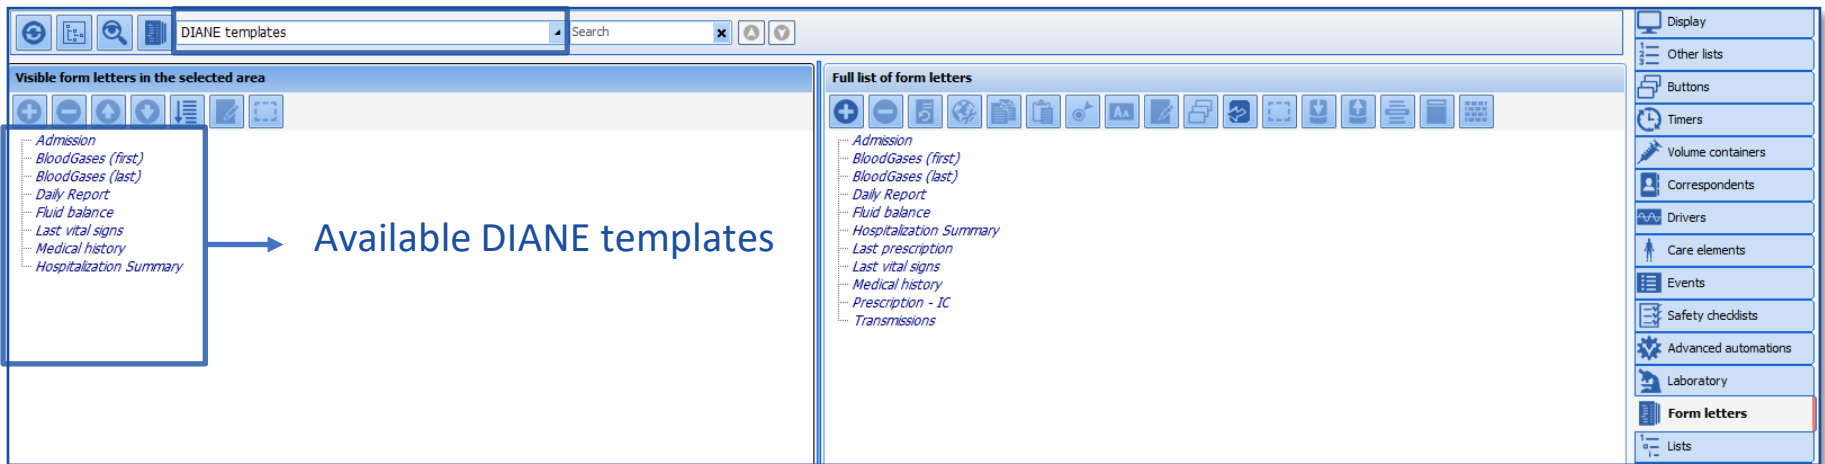

DIANE templates

DIANE templates

Used to **import items from patient records.**

They can be set up in the **Form Letters** tab of the **DIANE Templates** menu.

They are then added via the display setup.

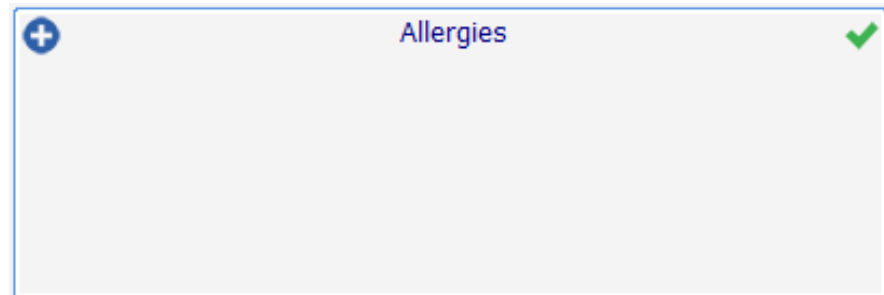

Available templates

Allergies [*DiaAllergies*]

This special **dialistMemo**
is used for **allergies**.

Mandatory:

- NON-CONFIGURABLE
- Visible
- Parent tab
- Name

Nursing notes

The Nursing Notes component is not configurable. Only the list calling targets is editable (List tab - Root: REA_TRANSMISSIONSCIBLEES)

The screenshot displays the 'Nursing Notes' application interface. At the top, there are tabs for 'Medical assesment', 'Nurse', and 'Transmissions', with 'Transmissions' selected. Below the tabs, there are two sub-tabs: 'Targeted nursing notes' and 'Targeted macro nursing notes'. The main area is a table with columns: 'Edited on:', 'By:', 'Target', 'Data', 'Actions', and 'Results'. A modal dialog is open over the table, with a title bar and a close button. The dialog has a header with columns: 'Target', 'Data', 'Actions', and 'Results'. The 'Target' column is currently selected. At the bottom of the dialog, there is a checkbox labeled 'Mark nursing note as important.' and two buttons: 'Confirm' and 'Cancel'. The main application has a footer with a list of filters: 'View deleted.', 'View closed for more than 24h.', and 'Limit history to 48h.'. There are also icons for editing, adding, and deleting, and a button labeled '+ Add a nursing note'.

Setting up the views (example: View 3 tab)

- 1 Add or delete a **chart part**
- 2 Selection of the **part contents**: vital signs, DIANE grid (as a care plan), comments, etc.
- 3 **List of available vital signs and lab results**
- 4 Drag and drop in one of the three areas

Detailed entry

Bacteria

Lab result

Alarm

Drugs

Vital signs

Medication orders (prescriptions)

Setting up the care plan

1 Create a **new tab** in the care plan

2 Name it

6 3 4

3 Start with a **time row**

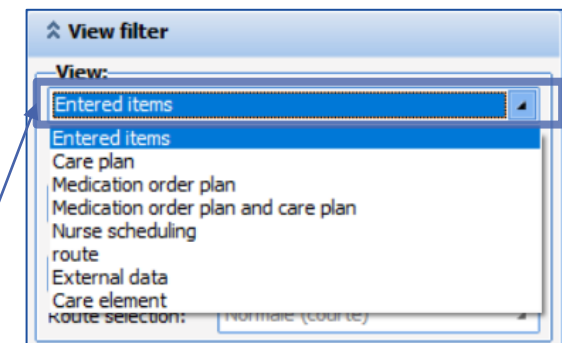

4 Add a **separator row** (= title)

5 Rename the title (click once)

6 Add one or more **rows of data**

7 Set up the row according to the expected information.

The data row is '**Entered items**' by default.

Setting up the care plan

Entered Items row

This type of row enables various types of data to **displayed by dragging and dropping from the middle pane:**

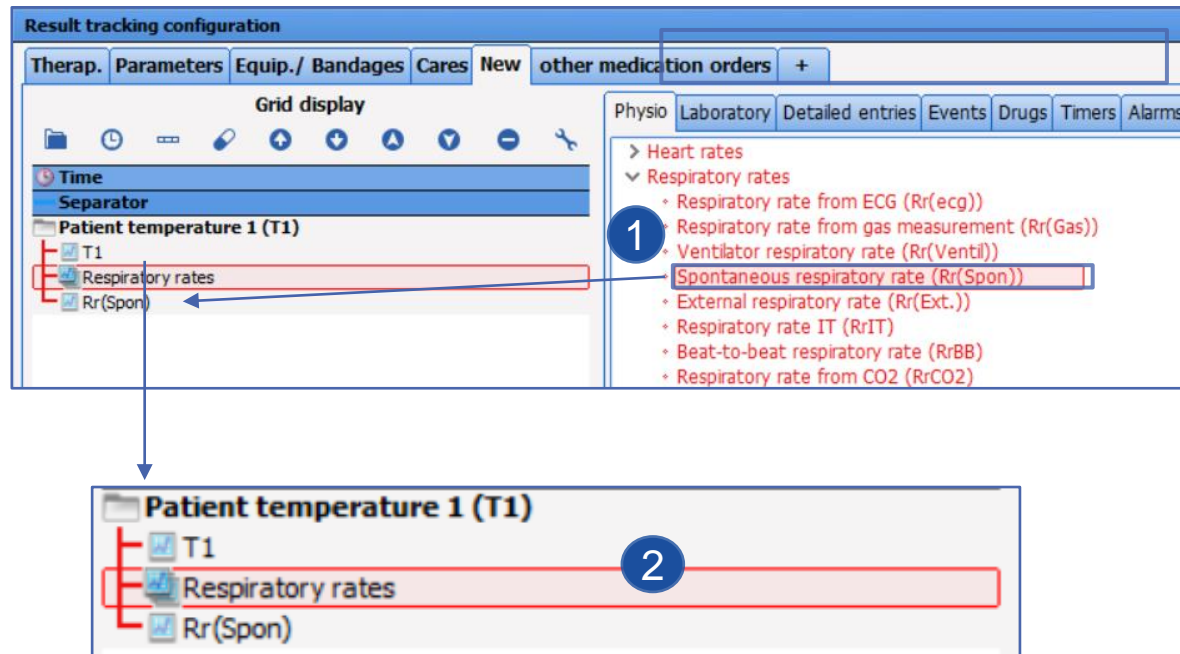

Example: creating a row showing BP

1 Drag and drop the 'blood pressure' group onto the desired row

2 Result after dragging and dropping.

The data row can be renamed (one click) and other subitems can be added.

Setting up the care plan

Medication Order Change row:

This row shows **the prescriber's name and the changes made by him/her in the care plan.**

- In the **Entered Items** display filter
- Tick the 'Not configured in this display' box
- Tick **Signature** in the drop-down menu

For best viewing, select these display mode options:

Setting up the care plan

Infection row:

This row shows a **patient's current infections**, provided they have entered by a doctor in the **Germes** tab.

- In the **Entered Items** display filter
- Tick the 'Not configured in this display' box
- Select **Infection** from the drop-down menu

For best viewing, select these display mode options:

View filter

View:
Entered items

Care plan items to do Late

From medication order field:

Additives
Infection

Not configured in this display of type:

Route selection: Normale (courte)

Display values: row

View mode

View one row for each item in

Title: No title

Hide empty rows

Alphabetical order of subitems

Merge the subitems into one row

 - > RES Venous contention
 - > RES Contentions
- ▼ RES Hygiene and Comfort
 - > Capiluve
 - > Change
 - ▼ Elimination
 - Basin
 - Commode chair

Setting up the care plan

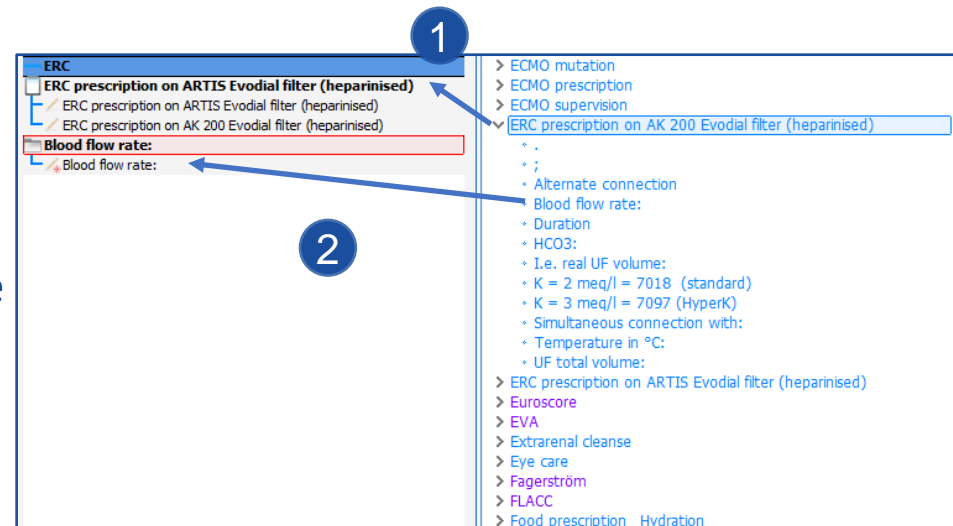

Special case 2: Doctor-ordered detailed entries

Example: doctor-ordered renal dialysis

- 1 Drag and drop the desired detailed entries from the middle pane listing all available the detailed entries
- 2 A field can be extracted from a detailed entry and displayed in a new row.

Be sure to drag and drop all detailed entries set in the Prescription tab
 → if a detailed entry is not in the care plan, the corresponding medication order will not appear!

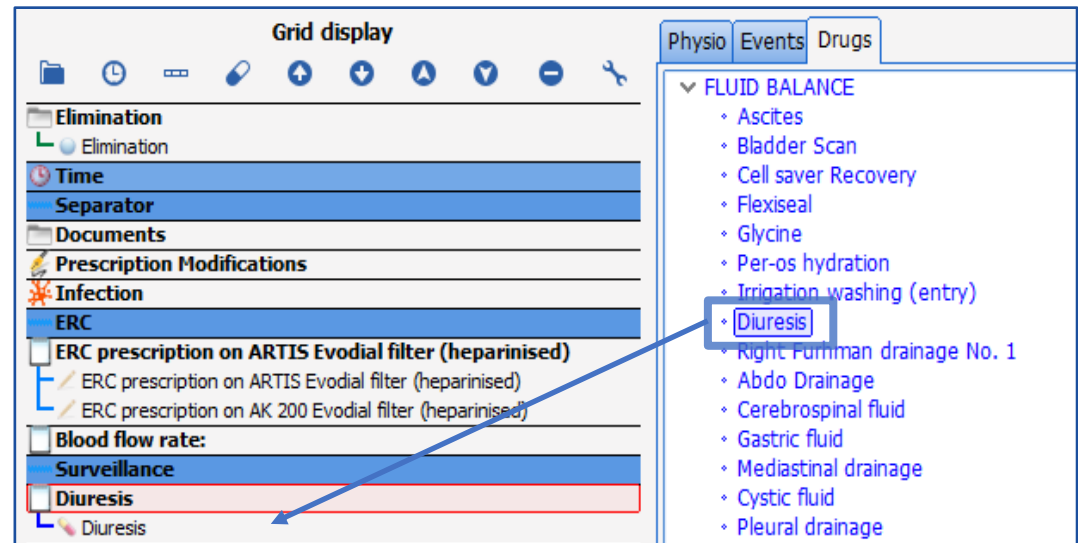

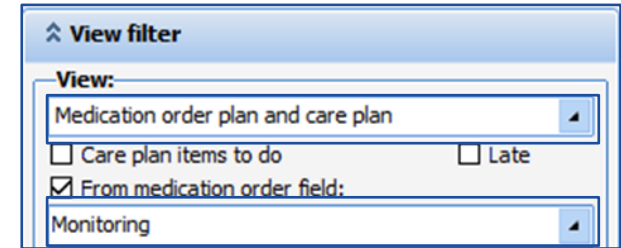

Setting up the care plan

Special case 3: Doctor-ordered monitoring

Show ALL doctor-ordered monitoring: vital signs AND fluid balance.

To display only fluid balance monitoring, use the middle column > **Drugs tab**

Example: urine output

Setting up the care plan

Nurse Scheduling row

Pertains to **Detailed entries** and **Events**.

Users will see this window

Example: the 'bedscores prevention' event and the Hands pillows

Laboratory tab

Display configuration > **Laboratory** tab then

The display of the Laboratory tab is set like the care plan.

Drag and drop the desired result group into the left-hand pane.

The screenshot shows the 'Result tracking configuration' window with the 'Laboratory' tab selected. The left-hand pane displays a tree view of result groups, with 'Blood gases' expanded. The central pane shows a list of selected items, including 'Arterial HCO3 (blood gases)', 'Venous HCO3 (blood gases)', 'Arterial base excess (blood gases)', 'Venous base excess (blood gases)', 'Carboxyhaemoglobin (blood gases)', 'Methaemoglobin (Blood gases)', 'Deoxyhaemoglobin (Blood gases)', 'Oxyhaemoglobin (Blood gases)', 'Lactates in mmol/L (Lact)', 'Total carbon dioxide (TCO2)', 'Haemoglobin BG (HbBG)', 'PaO2/FiO2 ratio (PaO2/FiO2 ratio)', and 'Blood gases comment (BloodGasComm)'. The right-hand pane shows configuration options for the 'Laboratory' tab, including 'Display values: columns', 'Display values: row', 'View mode', 'Height', 'View filter', 'External data', 'Care elements', 'Appearance', and 'Values having a duration'.

Laboratory tab

Display configuration > **Laboratory** tab then

Provides a **'safety net'** and displays all a patient's lab results in the care plan:

- Create a row
- Entered Items** display filter
- Tick the 'Not configured in this display type' box and select **Unassociated lab result**

The screenshot shows a 'View filter' configuration window with the following settings:

- View:** Entered items
- Care plan items to do
- Late
- From medication order field:
- Additives
- Not configured in this display of type:
- Unassociated lab result (highlighted)
- Route selection: Normale (courte)

Germs tab

Display configuration > **Germs** tab, then

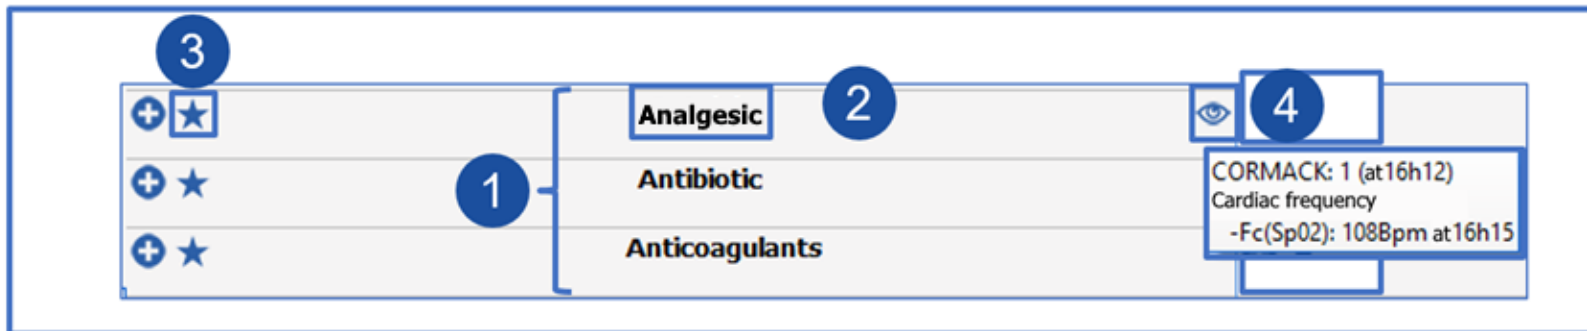

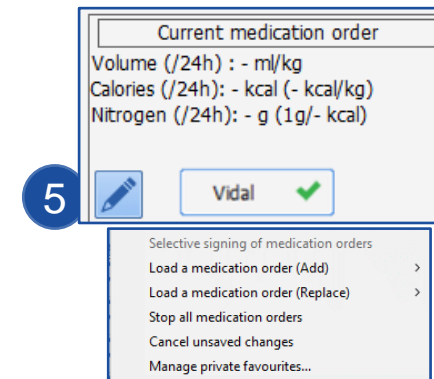

- The top area is set like the care plan.
- The bottom area is frozen. Only the lists can be edited (Lists tab - ROOTS: REA_GERMES, REA_ISOLEMENT, REA_ANTOBIOS_BACTERIO)

Make sure you do not change the name of the ROOT.

Setting a structured medication order

Five items can be set in the Medication Orders tab:

- 1 Category order
- 2 Category type
- 3 Favourites setup
- 4 Medication order recommendations setup
- 5 Medication order protocol setup

Setting a structured medication order

Setting the category order

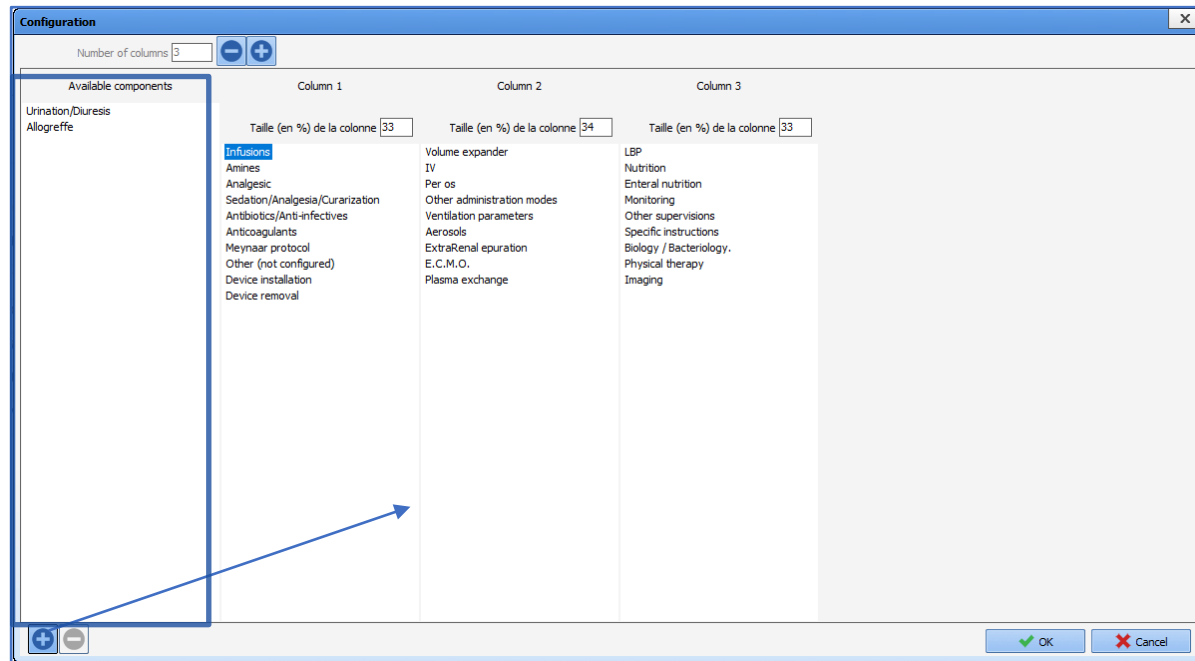

The screenshot shows the 'Current configuration' window for the 'R animation: Intensive Care' module. The window title is 'Display configuration of module R animation: Intensive Care - Version: 4.8.3.21762'. The 'Prescription' tab is selected. The main area displays a table of medication categories. A blue circle with the number '1' is placed over the 'Per os' category. A blue arrow points from the bottom text to a cogwheel icon in the top right corner of the window.

Infusions	Volume expander	LBP
Amines	IV	Nutrition
Analgesic	Per os	Enteral nutrition
Sedation/ Analgesia/ Curarization	Other administration modes	Monitoring
Antibiotics/ Anti-infectives	Ventilation parameters	Other supervisions
Anticoagulants	Aerosols	Specific instructions
Meynaar protocol	ExtraRenal epuration	Biology / Bacteriology.
Other (not configured)	E.C.M.O.	Physical therapy
Device installation	Plasma exchange	Imaging
Device removal		

1 Click the cogwheel to set the order of the categories

Setting a structured medication order

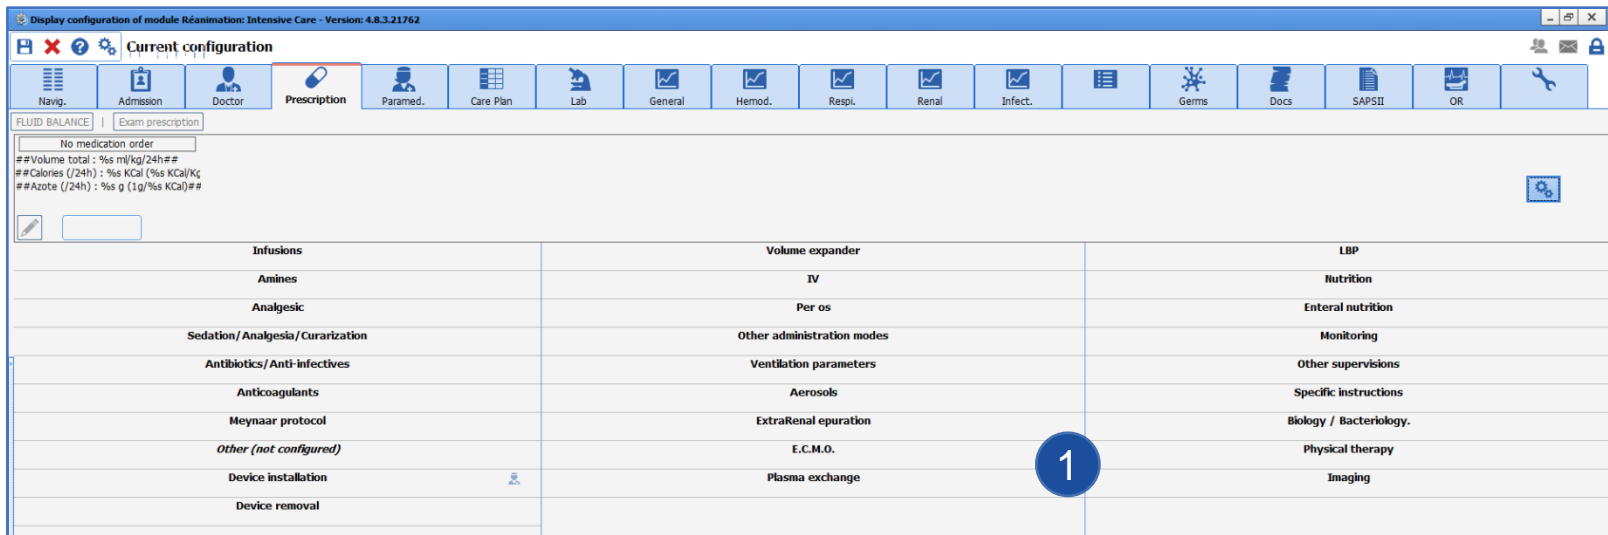

Adding a medication order category

This area is used to arrange **categories** (drag and drop), select the **number of columns** and their **widths** (in %) and **add new categories** ('+' button). Only Detailed Entry categories can be renamed. The other categories must be selected from the list.

Setting a structured medication order

Editing a medication order category

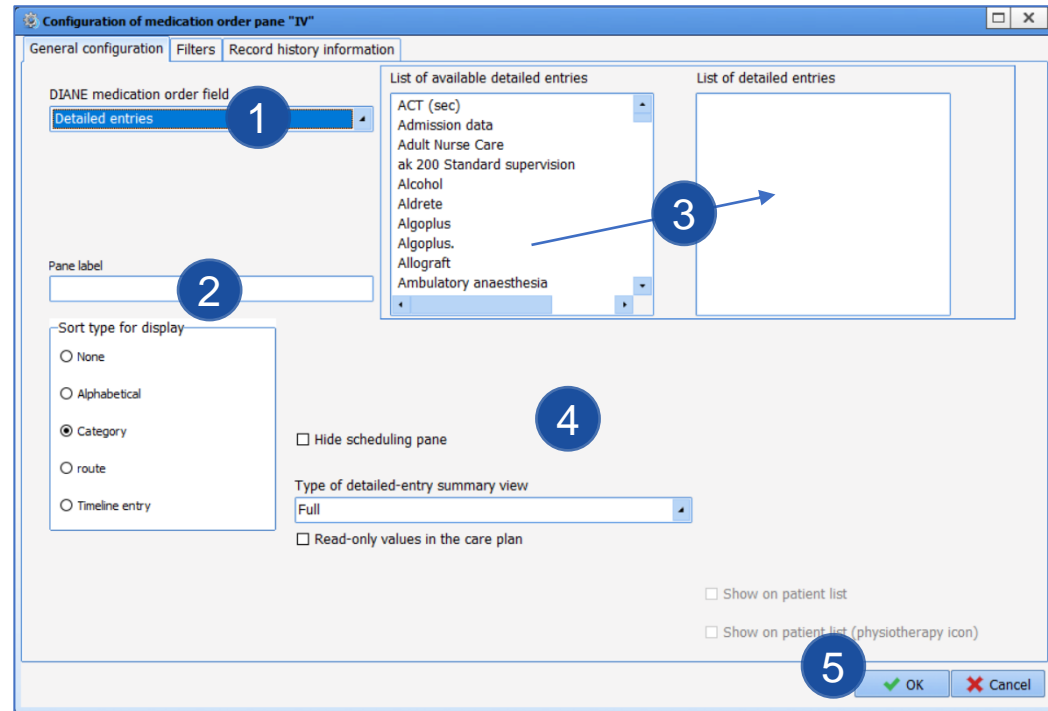

1 Double-click the desired category to edit it

Setting a structured medication order

Setting a Detailed Entry category

- 1 Select the **medication order field**
- 2 **Name the category**
- 3 **Drag and drop** detailed entries
- 4 Select the desired **options**
- 5 **Confirm**

Once the categories have been set up, be sure to **save the configuration** before exiting the page.

Setting a structured medication order

Users can access detailed entries by clicking the  button

 	Protocols IV Insulin protocol_ SC insulin protocol
	Device installation

Setting a structured medication order

Setting a drug category

1 Select the **medication order field** and the **reference list**

2 Select the desired **options** for the drugs in the configured formulary

3 **Drag and drop** the desired drugs

4 Select a default **schedule**

5 Option for displaying in the left-hand area of the patient list.

6 **Confirm**

The screenshot shows the 'Configuration of medication order pane IV' dialog box with the following elements and callouts:

- 1**: Points to the 'DIANE medication order field' dropdown menu, which is currently set to 'IV'.
- 1**: Points to the 'Reference list' dropdown menu, which is currently set to 'Formulary'.
- 3**: Points to the 'Formulary list' and 'Configured formulary list' panes. An arrow indicates the drag-and-drop action from the formulary list to the configured formulary list.
- 2**: Points to the 'Sort type for display' section, where 'Timeline entry' is selected.
- 4**: Points to the 'Default scheduling' dropdown menu, which is set to 'X times per'.
- 5**: Points to the 'Display on patient list' checkbox, which is currently unchecked.
- 6**: Points to the 'OK' button at the bottom right of the dialog box.

Other visible elements include the 'General configuration', 'Filters', and 'Record history information' tabs, and various checkboxes for options like 'Hide product flow rate pane', 'Hide administration duration', 'Disable dilution', 'Hide dilution details', 'Hide scheduling pane', 'Use the simplified medication order', 'Display on patient list (Physiotherapy icon)', and 'Undefined duration'.

Setting a structured medication order

- **Display options** for the Medication Order window:

Use the simplified medication order

Simplified product medication order

1 times per day or During 1 day(s)

Condition or comment

OK Close

- Hide product flow rate pane
- Hide administration duration
- Disable dilution
- Hide dilution details
- Hide scheduling pane
- Use the simplified medication order

Allows users to issue **medication orders** in a **simplified window** that is tailored to delivery modes such as oral.

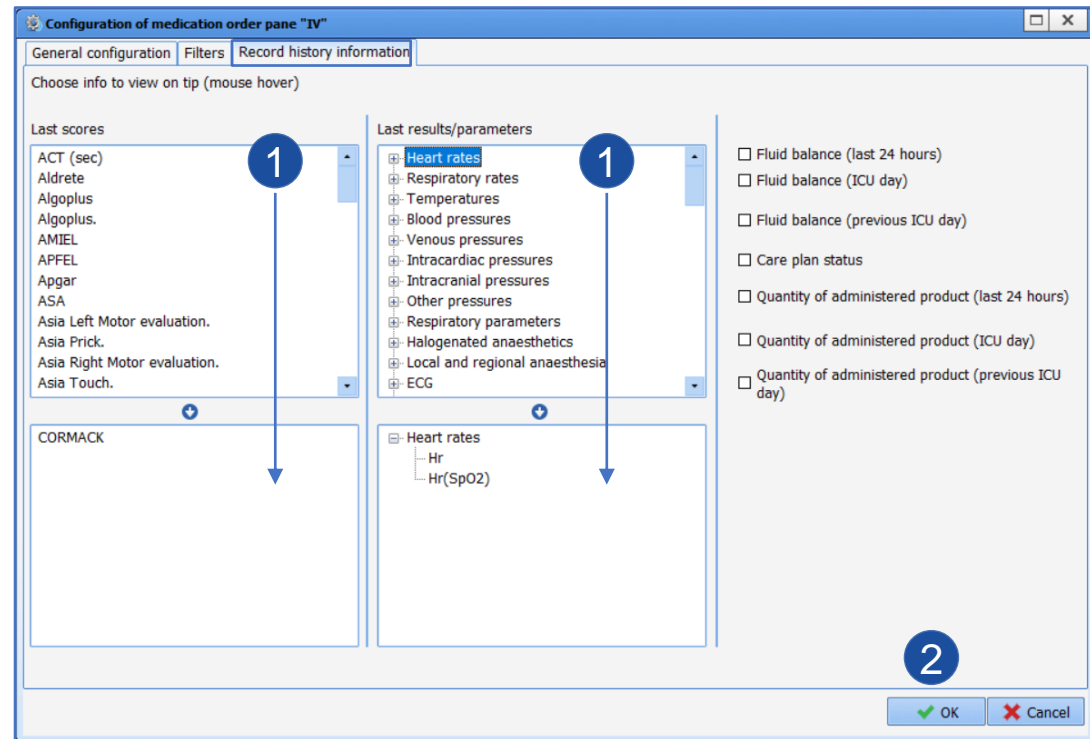

Setting a structured medication order

Setting a medication order recommendation

In the **Record History Information** tab, set up a **preview** of the vital signs, scores, fluid balance (appears on **mouseover** of the selected category):

1 Drag and drop the desired parameters or scores

2 Confirm

Setting a structured medication order

A pop-up containing **information** appears when users **hover the mouse** over the **eye icon**. 

 	Electric syringes	
 	Protocols	

Blood pressures

- NIPs: 125mmHg on 23/06/2008 at 18h06
- NIPm: 94mmHg on 23/06/2008 at 18h06
- NIPd: 75mmHg on 23/06/2008 at 18h06

Setting a structured medication order

A default frequency and display mode (restricted or complete) can be set for the 'detailed entry' medication order fields.

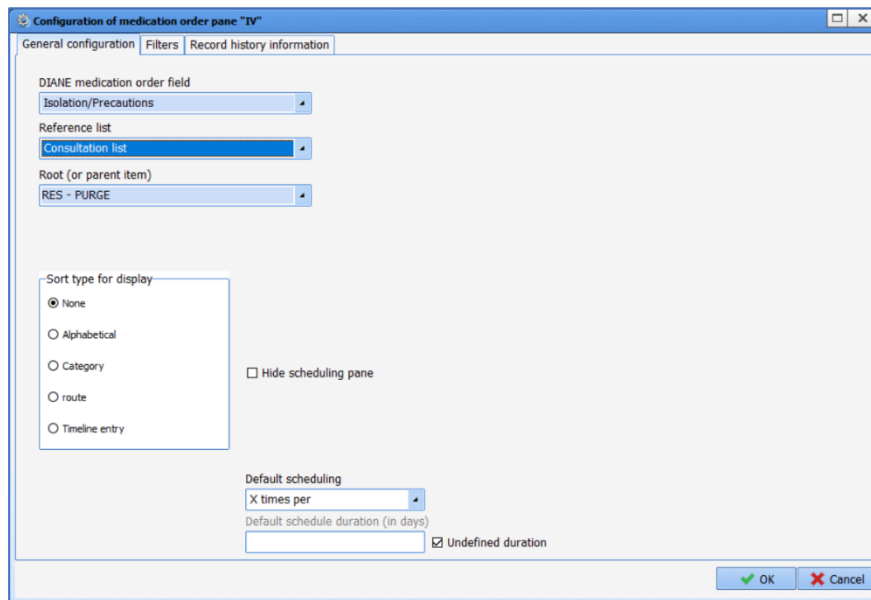

- Per detailed entry (default)

The screenshot shows a configuration window for a medication order titled "Bio_Admission examination". On the left side, there are three options: a checkbox for "Hide scheduling pane", a dropdown menu for "Type of detailed-entry summary view" set to "Full", and a checkbox for "Read-only values in the care plan". On the right side, there are three fields: "Frequency:" with a value of "1" and a unit of "times per" followed by a unit of "day(s)"; "From:" with a checked "Now" option, a time field set to "09:08", and an unchecked "Tomorrow" option; and "During:" with a value of "1" and a unit of "day(s)".

- For the category (default)

Setting a structured medication order

- Ventilation parameters: non-configurable medication order field.
- *Other not configured*: non-editable field (used to display non-configured medication orders in the area).
- Isolation/Precautions: the following settings must be used to ensure the associated icons appear in the patient list and banner.

Main menu tab

Groups together a set of buttons/shortcuts.

Left-clicking opens the configuration window for:

- **displaying/hiding buttons** (buttons not visible to users appear in italics in configuration mode)
- **defining actions**

The image shows the Navio main menu and a configuration window for the 'Medical record' tab.

Main Menu: The main menu consists of several tabs: **Navig.**, **Admission**, **Doctor**, **Prescription**, **Paramed.**, **Care Plan**, **Lab**, **General**, and **Hemod.**

Medical record tab: This tab contains the following buttons: **ICU admission assesment** (highlighted with a blue box), *Evolution*, *Invalid*, *Procedures*, *SAPSII*, *RUM*, *Docs*, **ICU remote admission**, and **Patient discharge**.

Medication orders tab: This tab contains the following buttons: *Prescription*, *Therapeutic booklet*, *Medical protocols*, and an empty button.

Nurse record tab: This tab contains the following buttons: *Invalid*, *Care Plan*, *Infect.*, *Lab*, *Germes*, and *Nurses protocols*.

Printouts tab: This tab contains the following buttons: **Centralized printings**, **Form letters:** (with a dropdown menu showing 'Complete consultation 2'), *Biological exam*, *Scan*, *IC stay summary*, *CR mutation macrotarget*, *CR -IC discharge letter*, *Prescription - IC*, *[Configurable form letter]*, *[Configurable form letter]*, *[Configurable form letter]*, and **Infectious Report**.

Administration tab: This tab contains the following buttons: *Correspondents* and *Settings*.

Browser button configuration window: This window is titled 'Browser button configuration' and has a close button (X). It contains the following options:

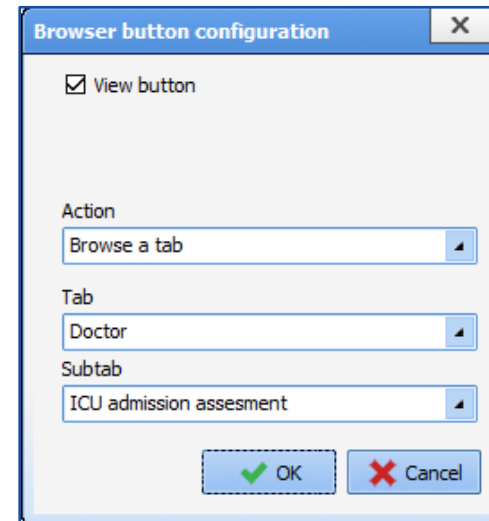

- View button:** A checkbox that is checked.
- Action:** A dropdown menu with 'Browse a tab' selected.
- Tab:** A dropdown menu with 'Doctor' selected.
- Subtab:** A dropdown menu with 'ICU admission assesment' selected.
- Buttons:** 'OK' (with a green checkmark) and 'Cancel' (with a red X).

Main menu tab

The various possible actions:

- Browse a tab
- View the unit procedures
- Medical unity summary (MUS)
- View the formulary used
- View the doctor protocols
- View the nursing protocols
- View the list of correspondents
- Launch the configuration tool

Setting the body diagram – Care Items tab

Care Items tab

1 Device categories

2 List of devices for the selected category

3 List of devices made available to the selected area

4 Creating a new device

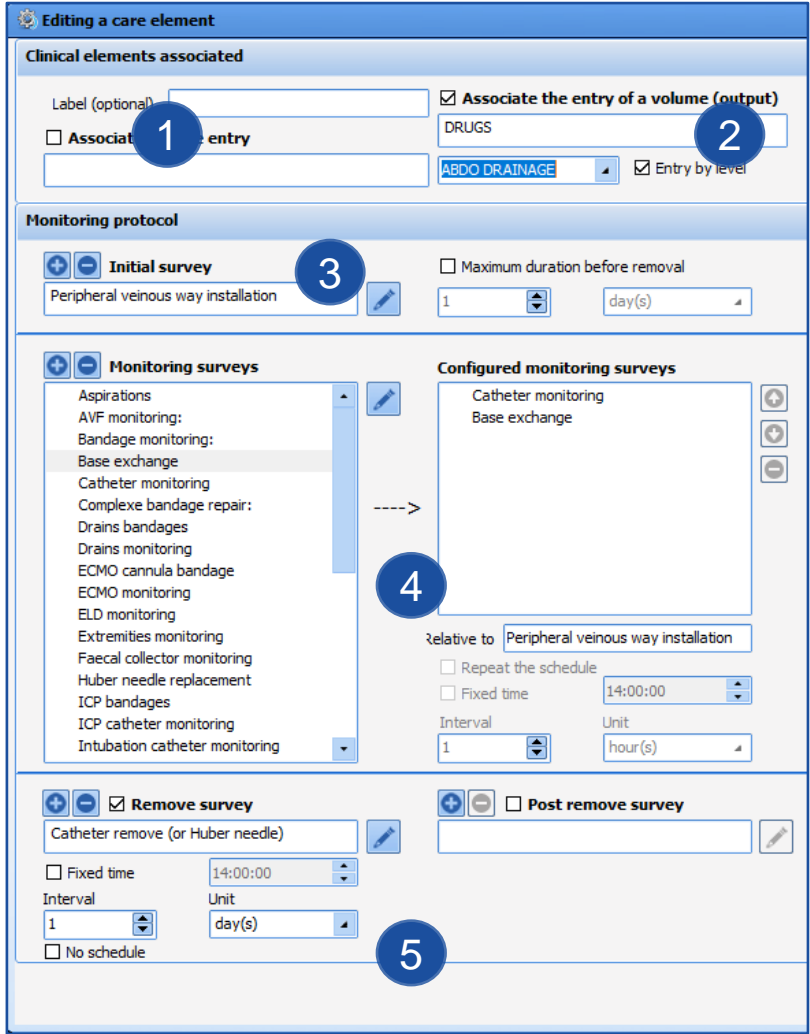

Once a care item is in use, it can no longer be edited. To do so, you must copy it.

Care Items tab

Editing a care item

- 1 Associate with a score (e.g. endotracheal tube associated with Cormack-Lehane classification)
- 2 Associate with a volume = fluid balance output (for quantification purposes)
- 3 Initial form area (placement). A maximum placement duration can be set (example: UC => 30 days max.)
- 4 Monitoring forms area: the available forms are shown on the left; the forms used for the device are shown on the right (copied by drag and drop). A default schedule can be set for each monitoring form
- 5 Removal and post-removal forms area. A default schedule can be set.

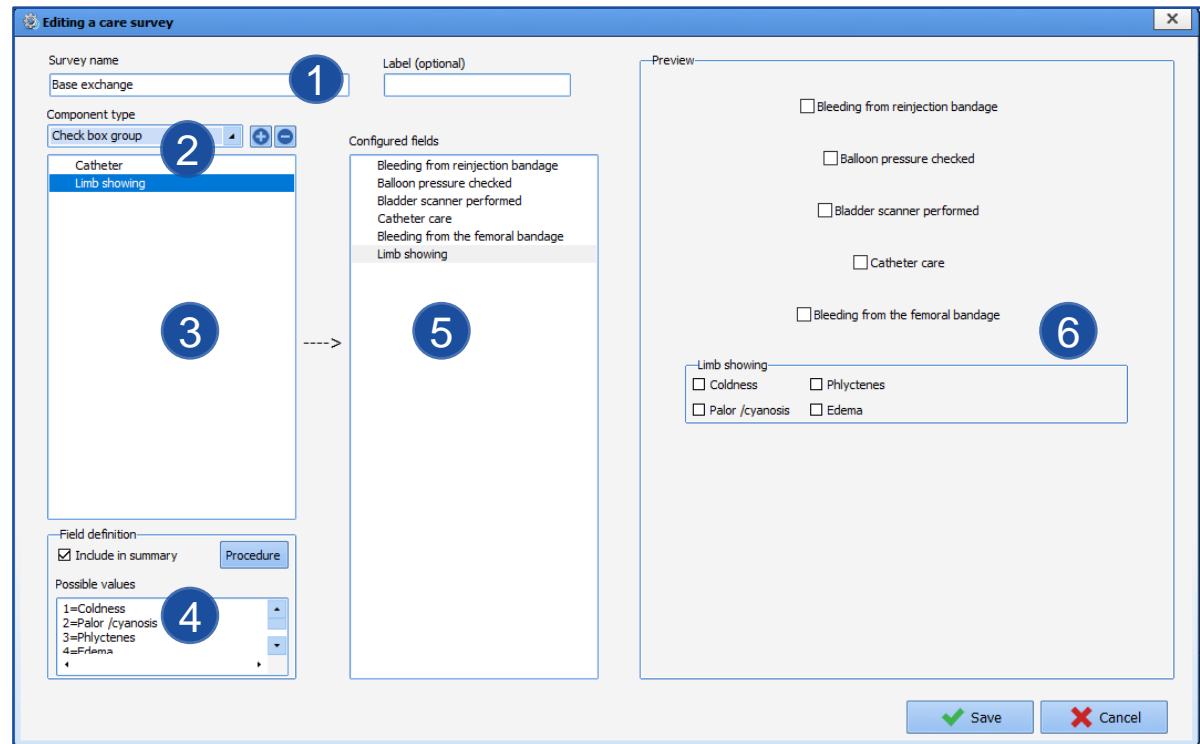

The screenshot shows the 'Editing a care element' window with the following sections and callouts:

- Clinical elements associated:**
 - Label (optional): [text input]
 - Associate with entry: [text input]
 - Associate the entry of a volume (output): [text input with value 'DRUGS']
 - ABDO DRAINAGE [dropdown]
 - Entry by level
- Monitoring protocol:**
 - Initial survey: [text input with value 'Peripheral venous way installation']
 - Maximum duration before removal: [text input with value '1'] [dropdown with value 'day(s)']
- Monitoring surveys:**
 - Left list: Aspirations, AVF monitoring, Bandage monitoring, Base exchange, Catheter monitoring, Complexe bandage repair, Drains bandages, Drains monitoring, ECMO cannula bandage, ECMO monitoring, ELD monitoring, Extremities monitoring, Faecal collector monitoring, Huber needle replacement, ICP bandages, ICP catheter monitoring, Intubation catheter monitoring.
 - Right list (Configured monitoring surveys): Catheter monitoring, Base exchange.
 - Relative to: [text input with value 'Peripheral venous way installation']
 - Repeat the schedule
 - Fixed time: [text input with value '14:00:00']
 - Interval: [text input with value '1'] [dropdown with value 'hour(s)']
- Remove survey:**
 - Remove survey: [text input with value 'Catheter remove (or Huber needle)']
 - Fixed time: [text input with value '14:00:00']
 - Interval: [text input with value '1'] [dropdown with value 'day(s)']
 - Unit: [dropdown with value 'day(s)']
 - No schedule
- Post remove survey:**
 - Post remove survey: [text input]

Care Items tab

- Form configuration: 

- 1 Form name
- 2 Component type
- 3 List of available components for the selected type
-  Create a component of the chosen type
- 4 Possible values for the checkbox/radio button group
- 5 Form components: drag and drop to change the order

The screenshot shows the 'Editing a care survey' window with the following elements:

- 1** Survey name: Base exchange
- 2** Component type: Check box group
- 3** List of available components: Catheter, Limb showing
- 4** Possible values for the checkbox/radio button group: 1=Coldness, 2=Palor /cyanosis, 3=Phlyctenes, 4=Edema
- 5** Configured fields: Bleeding from reinjection bandage, Balloon pressure checked, Bladder scanner performed, Catheter care, Bleeding from the femoral bandage, Limb showing
- 6** Form preview: Bleeding from reinjection bandage, Balloon pressure checked, Bladder scanner performed, Catheter care, Bleeding from the femoral bandage, Limb showing (with sub-items: Coldness, Phlyctenes, Palor /cyanosis, Edema)

- 6 Form preview (the components are centred one below the other; only the order can be changed)

Care Items tab

- 3 Note: Like components, forms can be 'general'. They are located in a library that is available for all other care items. Advantage: distinguish chest tubes from pleural drains on the diagram, but with the same placement form.

This means that if the 'tube placement' general form is edited, it will be edited for both types of drain.

The same applies to components: they are available here for all other forms. *Example: if a new possible answer is added to the drop-down menu used in three different forms, the answer will be changed and made available in all three places.*

- 4 **Include in summary**: corresponds to the blue 'summary' part visible in the diagram and as a pop-up when the occurrence in the care plan is clicked.

The **Procedure** box is used to associate a procedure code that will be triggered upon confirmation.

Example: cost of intubation with/without fibre-optic endoscopes at different codes.

Care Items tab

The right-hand area allows you to specify the possible locations for each device.

Example: suggesting an intubation tube inserted through the mouth/nose seems to be a good idea.

Show number allows you to distinguish between identical devices

Example: PVC 1, PVC 2

Show total time adds up the times during which the item is placed/removed/placed back.

Example of intubation/extubation/re-intubation: adds up the total time a patient is intubated.

Show sagittal plane differentiates between left and right

Show location includes the location in the name
