

Dräger becomes an official distributor of Bow Medical's Diane software in Romania

Bucharest, 2 October 2025 – Dräger, an international leader in the fields of medical and safety technology, is strengthening its partnership with Bow Medical by becoming the official distributor of the Diane software in Romania. By joining forces, Dräger and Bow Medical now offer Romanian hospitals powerful digital solutions that help clinicians deliver safer, more efficient care in anesthesia and intensive care.

Developed by Bow Medical, Diane is a benchmark solution for managing critical care. It enhances the traceability of medical data, secures care protocols, and facilitates the daily work of healthcare professionals thanks to its intuitive and interoperable interface.

As an official distributor in Romania, Dräger supports hospitals and clinics with the integration and use

of the Diane software, drawing on its recognised expertise in medical solutions.

Real-time integration of Dräger biomedical data with Diane Anesthesia and Diane ICU modules

This partnership enables real-time transmission of all biomedical data

from Dräger's anaesthesia and intensive care stations directly into the Diane Anesthesia and Diane Réa modules. This interoperability will first enable the automatic synchronisation of biomedical parameters with anaesthetic and surgical events, as well as medical prescriptions. More importantly, it will provide a comprehensive and up-to-date overview of the patient journey, helping clinicians

to access relevant data and make informed decisions based on a clear, up-to-date view of the patient's condition

An automated process for improved patient care

Digitalisation and automation of data flow help reduce manual entry, enhance the safety of medical protocols, and improve staff efficiency.

Seamless data transfer to the patient record

Following interventions, the digital anaesthesia record will be automa-

tically generated and directly integrated into the patient's medical file, ensuring optimal traceability and better continuity of care.

This partnership between Dräger and Bow Medical represents a major step forward in the interoperability of critical care systems in Romania, serving both patient safety and the performance of care teams.

"This collaboration with Bow Medical is a natural step in our commitment to support the development of healthcare infrastructure in Romania. By bringing advanced digital tools like Diane to anaesthesia and intensive care teams, we help simplify clinical

workflows and enhance patient care." said Bogdan Stoica, Sales & Service Medical Director, representative of Draeger Romania.
